1.1. Shopping costs

- The government's report uses a large sample size. $n = 1,000,000,000,000$
- No, this country's mean house price could be the same as the national average because BEC's test is far-from-random (biased)
- $SE = \frac{s}{\sqrt{n}} = \frac{100,000}{\sqrt{1000}} = 3,162 \left(\frac{100,000}{\sqrt{10^3}} \right) = 3,162$ or $SE = 31,622$ or $SE = 40,000$

We need to sample approximately 1,000 house prices with $SE = 1,000$.

1.2. Gas mileage

$F = 0.0000$ is strong evidence that the gas mileage of automobiles leaving off the assembly line after the manufacturing adjustment has been increased. We are 100% confident that the mean gas mileage has increased between 0.18 and 0.22 million gas gallons.

1.3. Type I error rate

	H_0 true	H_0 false	α
H_0	1	1	0.05
H_1	0	1	0.20
H_0	1	1	0.05
H_1	0	1	0.20
F	0	1	0
T	0	1	0.05, 0.20

1.4. Improving productivity

- $SE = \frac{s}{\sqrt{n}} = 50$ $SE = \frac{s}{\sqrt{n}} = 100$
- A Type I error would be very expensive for the packing company, so Type I error would mean that the manager rejected the null hypothesis when in fact the null hypothesis is true. In this situation, by rejecting the null hypothesis the company thought the training improved productivity, so they paid for the construction for all employees. In reality, the training did not improve productivity so the company wasted money constructing their new tool.
- To decrease the power of the test, we could increase the level of significance α to 1, or increase the sample size. Increasing the level of significance would lead to adopting a training method that actually does not improve productivity. By increasing the sample size, the test would become and the test might later prove true.

1.5. High school

The statistical procedure we would use for the test for the difference of means.

- Independent groups: Data from test and test observation independent.
- Randomization: The sample of the response variable was randomly selected.
- 1-100 conditions: There were more than 100 students in 100 schools, 100 schools from both test and test, so a sample of 100 is less than 10% of all students in 100 schools.
- Normality conditions: The distribution of the mean from the test are roughly symmetric, but the within school mean from the test are very skewed. We cannot satisfy this condition, so we cannot proceed with the test.
