Futureselves Paul Englert, 2023-11-25 Futureselves are the visions that we have for ourselves in the future. This book covers how these visions are central to our understanding of human behaviour as inherently goal-driven. It covers these concepts both scientifically and practically, exploring both impact on behaviour as well as a guide on how to use Futureselves for self-knowledge and self-improvement. Futureselves brings together a long history of teleological approaches in psychotherapy and ties the Futureselves concept to contemporary philosophical ideas such as the absence of free will. The book is suitable for undergraduate and postgraduate studies into the nature of the self and self-development. **Models for**

Planning Wildlife Conservation in Large Landscapes Joshua Millspaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling. *Models for Planning Wildlife Conservation in Large Landscapes* is appropriate for students and researchers alike. The unique blend of conceptual, methodological, and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning. The book makes important contributions to wildlife conservation of animals in several ways: 1) it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning; 2) it provides practical advice for the ecologist conducting such studies; and 3) it supplies directions for future research including new strategies for successful studies. Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning, the book could be used in studying wildlife habitat models, conservation planning, and management techniques. Additionally, it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations. Additionally, the length of the book would be ideal for graduate student seminar course. Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists. With ever-tightening budgets for wildlife research and planning,

activities there is a growing need to use computer methods Use of simulation models represents the single best alternative However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of alternative modeling techniques It is also important that practical guidance be provided to biologists along with a demonstration of utility of these procedures Currently there is little guidance in the wildlife or natural resource planning literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect time for a syntheistic publication that clearly outlines the concepts and available methods and illustrates them Only single resource book of information not only on various wildlife modeling techniques but also with practical guidance on the demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife ecologists and others within a GIS context Written by a team of subject area experts *Frameworks for Tourism Research*

Douglas G. Pearce,2012-01-01 Frameworks are the foundation of good scholarship They structure organize and communicate research underpin individual studies and shape the field of study as a whole This book introduces students to the concept of frameworks in tourism research and provides a review discussion and critique of frameworks Theoretical conceptual analytical and integrative frameworks are all covered in detail with the features use strengths and limitations of each from discussed and illustrated using a wide range of examples and applications across the field of tourism studies It is suitable for academe
