An abstract illustration of a cell cluster, possibly a spheroid or organoid, rendered in warm, glowing orange and yellow tones. The cluster is composed of numerous overlapping, translucent spheres of varying sizes, giving it a three-dimensional, textured appearance. It is set against a dark red background with faint, glowing white lines that suggest a network or microenvironment. The overall aesthetic is scientific and futuristic.

**Stem Cell Bioengineering and Tissue Engineering Microenvironment** Satya Prakash, Dominique Shum-Tim, 2011

This is a comprehensive review of the current state of stem cell bioengineering from authorities in the field. The first part of the book includes the basic research work on stem cells and bioengineering carried out by various laboratories. The second part consists of a review of the current development of various microcapsules in stem cell therapy. The last part will summarize the overall clinical trials on stem cell therapy and myocardial regeneration as well as the most updated personal experience recently completed by well known experts in this field.

The Stem Cell Microenvironment and Its Role in Regenerative Medicine and Cancer Pathogenesis Cristian Pablo Pennisi, Mayuri Sinha Prasad, Pranela Rameshwar, 2022-09-01

How stem cells behave is very much a factor of their local microenvironment also known as the stem cell niche. Physical chemical or electrical signals from the neighboring cells or biochemical signals from distant cells are crucial in the cell fate decision process. A major challenge of tissue engineering is to mimic the natural cell environment by designing very sophisticated scaffolds able not only to mechanically support cells but also to release signals biologically relevant for governing stem cell fate. In addition, increasing evidence suggests that abnormal interaction of stem cells with their niche is responsible for altered cell function leading to malignant transformation. This book discusses some of the recent advances in stem cell research that may help understanding the properties of the niche that govern stem cell fate. Technical topics discussed include Stem cell biology, Cancer stem cells, Stem cell interactions with biomaterials, Engineering the stem cell microenvironment, Stem cells in tissue regeneration and repair. The Disputationes Workshop series is an international initiative aimed at disseminating stem cell related cutting edge knowledge among scientists, healthcare workers, students and policy makers. This book emerges as a result of the scientific contributions presented and discussed during the fifth Disputationes Workshop held in Aalborg, Denmark in April 2014. The stem cell microenvironment and its role in regenerative medicine and cancer pathogenesis is ideal for academic staff and master research students in biomedical and health sciences.
