Against Utopia - Technology won't save us Victor de la Fuente, 2022-01-10 Against Utopia Technology Will Not Save Us is a book that unsettles because it dismantles an illusion We live surrounded by discourses that promise a perfect future built on algorithms metaverses and machines that make decisions for us The dominant narrative speaks of self-driving cars that will end accidents of artificial intelligences that will solve what humans cannot of cryptocurrencies that will free the economy of genetic advances that will perfect life and of a Singularity that will take us beyond our own intelligence But behind that vision lies a false promise the idea that technology on its own will be enough to save us The author a technophilosopher invites us to question this mirage The transformative power of each innovation is acknowledged but all of them carry the imprint of those who create them biases ethical dilemmas hidden interests and unforeseen consequences The metaverse with its promise of parallel worlds where anything is possible may end up eroding the way we relate to each other Autonomous vehicles heralded as the dawn of a new era in mobility raise unsettling questions about work decision-making power and dependence on systems we barely understand Artificial intelligence far from being neutral reflects and amplifies

our limitations and although cryptocurrencies and NFTs are presented as symbols of freedom and disruption their environmental impact volatility and speculative use reveal a darker side Even biogenetics capable of altering the most intimate aspects of life forces us to confront questions that verge on the sacred What does it mean to intervene in the code of the human Where do we draw the line And on the horizon looms the Singularity that promise of a definitive leap into the posthuman which inspires not so much hope as vertigo This book does not seek to deny the importance of innovation or to paint a bleak future for the mere sake of criticism Its aim is a critical exercise to look at technology without the veil of utopia to accept its power and at the same time its risks and limitations Because the real decision does not lie in the machines but in the way we choose to coexist with them Against Utopia is ultimately an invitation to think calmly in a time that seems to be moving far too fast A call not to confuse promises with certainties and to remember that the future is not designed solely with code but with responsibility reflection and human consciousness Everyday Media Literacy Sue Ellen Christian,2023-10-17

In this second edition award winning educator Sue Ellen Christian offers students an accessible and informed guide to how they can consume and create media intentionally and critically The textbook applies media literacy principles and critical thinking to the key issues facing young adults today from analyzing and creating media messages to verifying information and understanding online privacy Through discussion prompts writing exercises key terms and links readers are provided with a framework from which to critically consume and create media in their everyday lives This new edition includes updates covering privacy aspects of AI VR and the metaverse and a new chapter on digital audiences gaming and the creative and often unpaid labor of social media and influencers Chapters examine news literacy online activism digital inequality social media and identity and global media corporations giving readers a nuanced understanding of the key concepts at the core of media literacy Concise creative and curated this book highlights the cultural political and economic dynamics of media in contemporary society and how consumers can mindfully navigate their daily media use This textbook is perfect for students and educators of media literacy journalism and education looking to build their understanding in an engaging way

Art in the Age of Machine Learning Sofian Audry,2021-11-23 An examination of machine learning art and its practice in new media art and music Over the past decade an artistic movement has emerged that draws on machine learning as both inspiration and medium In this book transdisciplinary artist researcher Sofian Audry examines artistic practices at the intersection of machine learning and new media art providing conceptual tools and historical perspectives for new media artists musicians composers writers curators and theorists Audry looks at works from a broad range of practices including new media installation robotic art visual art electronic music and sound and electronic literature connecting machine learning art to such earlier artistic practices as cybernetics art artificial life art and evolutionary art Machine learning underlies computational systems that are biologically inspired statistically driven agent based networked entities that program themselves Audry explains the fundamental design of machine learning algorithmic structures in terms accessible to

the nonspecialist while framing these technologies within larger historical and conceptual spaces Audry debunks myths about machine learning art including the ideas that machine learning can create art without artists and that machine learning will soon bring about superhuman intelligence and creativity Audry considers learning procedures describing how artists hijack the training process by playing with evaluative functions discusses trainable machines and models explaining how different types of machine learning systems enable different kinds of artistic practices and reviews the role of data in machine learning art showing how artists use data as a raw material to steer learning systems and arguing that machine learning allows for novel forms of algorithmic remixes

The Feeling Economy Roland T. Rust,Ming-Hui Huang,2021-01-19 As machines are trained to think many tasks that previously required human intelligence are becoming automated through artificial intelligence However it is more difficult to automate emotional intelligence and this is where the human worker s competitive advantage over machines currently lies This book explores the impact of AI on everyday life looking into workers adaptation to these changes the ways in which managers can change the nature of jobs in light of AI developments and the potential for humans and AI to continue working together The book argues that AI is rapidly assuming a larger share of thinking tasks leaving human intelligence to focus on feeling The result is the Feeling Economy in which both employees and consumers emphasize feeling to an unprecedented

extent with thinking tasks largely delegated to AI The book shows both theoretical and empirical evidence that this shift is well underway Further it explores the effect of the Feeling Economy on our everyday lives in the areas such as shopping politics and education Specifically it argues that in this new economy through empathy and people skills women may gain an unprecedented degree of power and influence This book will appeal to readers across disciplines interested in understanding the impact of AI on business and our daily lives It represents a bold potentially controversial attempt to gauge the direction in which society is heading

The History of Visual Magic in Computers Jon Peddie, 2013-06-13 If you have ever looked at a fantastic adventure or science fiction movie or an amazingly complex and rich computer game or a TV commercial where cars or gas pumps or biscuits behaved liked people and wondered How do they do that then you ve experienced the magic of 3D worlds generated by a computer 3D in computers began as a way to represent automotive designs and illustrate the construction of molecules 3D graphics use evolved to visualizations of simulated data and artistic representations of imaginary worlds In order to overcome the processing limitations of the computer graphics had to exploit the characteristics of the eye and brain and develop visual tricks to simulate realism The goal is to create graphics images that will overcome the visual cues that cause disbelief and tell the viewer this is not real Thousands of people over thousands of years have developed the building blocks and made the discoveries in mathematics and science to make such 3D magic possible and The History of Visual Magic in Computers is dedicated to all of them and tells a little of their story It traces the earliest understanding of 3D and then foundational mathematics to explain and construct 3D from mechanical computers up to today s tablets Several of the amazing computer graphics algorithms and tricks came of periods where eruptions of new ideas and techniques seem to occur all at once Applications emerged as the fundamentals of how to draw lines and create realistic images were better understood leading to hardware 3D controllers that drive the display all the way to stereovision and virtual reality
