| Assess & Evaluate         | Perform GI Assessment – assessing need for NG Tube placement.                                                                                                                                                                                                                                                                                                                                                                                  |        |        |                    |
| Position                  | Place patient in high Fowler's position and cover chest with towel or drape.                                                                                                                                                                                                                                                                                                                                                                   |        |        |                    |
| Patient Teaching          | Explain the procedure and develop appropriate hand signal for patient.                                                                                                                                                                                                                                                                                                                                                                         |        |        |                    |
| Facial Assessment         | Use the penlight to view the client's nostrils. Assess for any facial or nasal passage issue contraindicated for this procedure. Have patient blow nose one nostril at a time if needed.                                                                                                                                                                                                                                                       |        |        |                    |
| Prepare                   | Obtain the appropriate equipment for NG tube placement. If suctioning is ordered, verify suction source at this time. Connect suction tube to source of negative pressure setting control per physician's order.                                                                                                                                                                                                                               |        |        |                    |
| Measure                   | Using the NG tube, measure the distance from tip of the nose to the earlobe, and then to the xiphoid process of the sternum. Mark the distance on the tube with a piece of tape or marker.                                                                                                                                                                                                                                                     |        |        |                    |
| Lubricate                 | Lubricate first 4 inches of the tube with water soluble lubricant.                                                                                                                                                                                                                                                                                                                                                                             |        |        |                    |
| Insert                    | Ask Patient to slightly flex the neck backward. Gently insert tube into a nare.<br><br>When the patient starts to gag, pull back tube slightly (until gagging ceases) and ask patient to tip forehead forward (give water with straw if applicable, have patient dry swallow if necessary).<br><br>Advance the tube several inches at a time as the client swallows.<br><br>Advance the tube until the taped or marked point reaches the nare. |        |        |                    |
