and Development Program, Many readers undoubtedly have run crosscut saws in the past and a lot of you know the
difference between a good running saw and a poorly filed one A poorly filed saw deserves the name I have often heard
attributed to it misery whip A well filed saw however is efficient and can be satisfying to use Only in recent years was a chain
saw developed that could beat a topnotch buckler in a contest There is a record of a 32 inch Douglas fir log cut in 1 minute
262 5 seconds by one buckler Saw filers of any quality are becoming very difficult if not impossible to find This manual was
written so those of you who use crosscut saws can maintain them yourselves and overcome some of the misery of that ol whip
The manual provides a basic description of how and why a crosscut saw works tips on building a saw vise and some
experience tested methods as a guide for achieving a well running saw Only saws having raker teeth are discussed because
they are by far the most common saws found today This includes lance perforated lance and champion tooth patterns
