Deep Time Noah Heringman, 2023-01-03 How the concept of deep time began as a metaphor used by philosophers poets and naturalists in the eighteenth and nineteenth centuries In this interdisciplinary book Noah Heringman argues that the concept of deep time most often associated with geological epochs began as a metaphorical language used by philosophers poets and naturalists of the eighteenth and nineteenth centuries to explore the origins of life beyond the written record Their ideas about the abyss of time created a way to think about the prehistoric before it was possible to assign dates to the fossil record Heringman examines stories about the deep past by visionary thinkers ranging from William Blake to Charles Darwin challenges the conventional wisdom that the idea of deep time came forth fully formed from the modern science of geology Instead he argues it has a rich imaginative history Heringman considers Johann Reinhold Forster and Georg Forster naturalists on James Cook's second voyage around the world who inspired by encounters with Pacific islanders connected the scale of geological time to human origins and cultural evolution Georges Louis Leclerc Comte de Buffon who drew on travel narrative antiquarian works and his own fieldwork to lay out the first modern geological timescale Blake and Johann Gottfried Herder who used the language of fossils and artifacts to promote ancient ballads and prehistoric song and Darwin's exploration of the reciprocal effects of geological and human time Deep time Heringman shows has figural and imaginative dimensions beyond its geological meaning **Engaging with the Past and Present** Paul M. Dover, 2023-06-05 This collection brings together fifteen essays from practitioners of a variety of disciplines that concern themselves with the past not only historians but scholars from other branches of the humanities and social sciences including theology art history

public history and archival science and natural sciences including geology paleontology astronomy and paleoanthropology What is the relationship between the past and the present This essential and seemingly straightforward question of central importance to many fields of study in fact yields a variety of answers with significant repercussions for methodology epistemology and pedagogy This volume s contributors describe how they relate phenomena in the past and their observations of the present revealing intellectual resonances and opportunities for dialogue across subjects that are too often walled off from one another By engaging scholars in a conversation about a first principle of their work this book offers a genuinely interdisciplinary consideration of a timeless question with implications for knowledge about both past and present Engaging with the Past and Present is full of insights and ideas for anyone seeking to understand the past or employ it as evidence for understanding present realities
