NATTRASS

The Aids Conspiracy Science Fights Back

Matthew Jones

The Aids Conspiracy Science Fights Back:

The AIDS Conspiracy Nicoli Nattrass, 2013-11-01 Since the early days of the AIDS epidemic many bizarre and dangerous hypotheses have been advanced to explain the origins of the disease In this compelling book Nicoli Nattrass explores the social and political factors prolonging the erroneous belief that the American government manufactured the human immunodeficiency virus HIV to be used as a biological weapon as well as the myth's consequences for behavior especially within African American and black South African communities Contemporary AIDS denialism the belief that HIV is harmless and that antiretroviral drugs are the true cause of AIDS is a more insidious AIDS conspiracy theory Advocates of this position make a conspiratorial move against HIV science by implying its methods cannot be trusted and that untested alternative therapies are safer than antiretrovirals These claims are genuinely life threatening as tragically demonstrated in South Africa when the delay of antiretroviral treatment resulted in nearly 333 000 AIDS deaths and 180 000 HIV infections a tragedy of stunning proportions Nattrass identifies four symbolically powerful figures ensuring the lifespan of AIDS denialism the hero scientist dissident scientists who lend credibility to the movement the cultpreneur alternative therapists who exploit the conspiratorial move as a marketing mechanism the living icon individuals who claim to be living proof of AIDS denialism's legitimacy and the praise singer journalists who broadcast movement messages to the public Nattrass also describes how pro science activists have fought back by deploying empirical evidence and political credibility to resist AIDS conspiracy theories which is part of the crucial project to defend evidence based medicine

Patient Zero and the Making of the AIDS Epidemic Richard A. McKay, 2017-11-22 Now an award winning documentary feature film The search for a patient zero popularly understood to be the first person infected in an epidemic has been key to media coverage of major infectious disease outbreaks for more than three decades Yet the term itself did not exist before the emergence of the HIV AIDS epidemic in the 1980s How did this idea so swiftly come to exert such a strong grip on the scientific media and popular consciousness In Patient Zero Richard A McKay interprets a wealth of archival sources and interviews to demonstrate how this seemingly new concept drew upon centuries old ideas and fears about contagion and social disorder McKay presents a carefully documented and sensitively written account of the life of Ga tan Dugas a gay man whose skin cancer diagnosis in 1980 took on very different meanings as the HIV AIDS epidemic developed and who received widespread posthumous infamy when he was incorrectly identified as patient zero of the North American outbreak McKay shows how investigators from the US Centers for Disease Control inadvertently created the term amid their early research into the emerging health crisis how an ambitious journalist dramatically amplified the idea in his determination to reframe national debates about AIDS and how many individuals grappled with the notion of patient zero adopting challenging and redirecting its powerful meanings as they tried to make sense of and respond to the first fifteen years of an unfolding epidemic With important insights for our interconnected age Patient Zero untangles the complex process by which individuals and groups

create meaning and allocate blame when faced with new disease threats What McKay gives us here is myth smashing revisionist history at its best **Creating Scientific Controversies** David Harker,2015-10-01 For decades cigarette companies helped to promote the impression that there was no scientific consensus concerning the safety of their product The appearance of controversy however was misleading designed to confuse the public and to protect industry interests Created scientific controversies emerge when expert communities are in broad agreement but the public perception is one of profound scientific uncertainty and doubt In the first book length analysis of the concept of a created scientific controversy David Harker explores issues including climate change Creation science the anti vaccine movement and genetically modified crops Drawing on work in cognitive psychology social epistemology critical thinking and philosophy of science he shows readers how to better understand evaluate and respond to the appearance of scientific controversy His book will be a valuable resource for students of philosophy of science environmental and health sciences and social and natural sciences

The Cambridge Handbook of Political Psychology Danny Osborne,Chris G. Sibley,2022-02-24 This handbook reviews political psychology from an international perspective covering foundational approaches and contemporary challenges

Anti/Vax Bernice L. Hausman,2019-04-15 Antivaxxers are crazy That is the perception we all gain from the media the internet celebrities and beyond writes Bernice Hausman in Anti Vax but we need to open our eyes and ears so that we can all have a better conversation about vaccine skepticism and its implications Hausman argues that the heated debate about vaccinations and whether to get them or not is most often fueled by accusations and vilifications rather than careful attention to the real concerns of many Americans She wants to set the record straight about vaccine skepticism and show how the issues and ideas that motivate it like suspicion of pharmaceutical companies or the belief that some illness is necessary to good health are commonplace in our society Through Anti Vax Hausman wants to engage public health officials the media and each of us in a public dialogue about the relation of individual bodily autonomy to the state s responsibility to safeguard citizens health We need to know more about the position of each side in this important stand off so that public decisions are made through understanding rather than stereotyped perceptions of scientifically illiterate antivaxxers or faceless bureaucrats Hausman reveals that vaccine skepticism is in part a critique of medicalization and a warning about the dangers of modern medicine rather than a glib and gullible reaction to scaremongering and misunderstanding *The Scientific*

Imagination in South Africa William Beinart,Saul Dubow,2021-05-20 An innovative three hundred year exploration of the social and political contexts of science and the scientific imagination in South Africa Trusting Science Kostas

Kampourakis,2025 Certain scientific fields have long been battlegrounds of controversy echoing a deep seated public distrust towards science This distrust is especially pronounced in areas of policy science that is science that informs policy decisions such as vaccination programs This book explores the roots of this distrust setting it apart from outright denial of science While absolute denial is rare distrust can be quite widespread often nourished by personal experiences or the persuasive

testimonies of others *Trusting Science* embarks on a journey to uncover some underexplored causes of science distrust It thus underscores the necessity of demystifying science by illuminating the nature of scientific evidence the inevitable presence of uncertainty the indispensable role of expertise and the subtle sway of personal biases Drawing on historical examples from vaccination and other life sciences *Trusting Science* offers opportunities for reflection about how science is done and argues that a renaissance in science education and communication is crucial for cultivating realistic expectations and rebuilding public trust in science *Sizonqoba! Outliving AIDS in Southern Africa* Busani Ngcaweni, 2017-04-11 The aim of this book is to better understand the phenomenon of HIV in a country that has faced the fullest might of the disease and yet after first faltering has made more progress than any other country in the world in its response to HIV It aims to reflect the complexity of this narrative and the range of widely differing insights by featuring what is likely the largest number of contributors in a single publication on the subject in South Africa as well as a full spectrum of specialised areas ranging from high end science to personal reflections *Imagined Liberation* Heribert Adam, Kogila Moodley, 2013-12-01 On a spectrum of hostility towards irregular migrants South Africa ranks on top Germany in the middle and Canada at the bottom South African xenophobic violence by impoverished slum dwellers is directed against fellow Africans Why would a society that liberated itself in the name of human rights turn against people who escaped human rights violations or unlivable conditions at home What happened to the expected African solidarity Why do former victims become victimizers *Imagined Liberation* asks what xenophobic societies can learn from other immigrant societies which avoided the backlash against multiculturalism in Europe **How to Make Music in an Epidemic** Matthew Jones, 2024-06-07 This volume examines responses to the epidemic of HIV AIDS in Anglophone popular musicians and music video during the AIDS crisis 1981 1996 Through close reading of song lyrics musical texts and music videos this book demonstrates how music played an integral part in the artistic activist response to the AIDS epidemic demonstrating music as a way to raise money for HIV AIDS services to articulate affective responses to the epidemic to disseminate public health messages to talk back to power and to bear witness to the losses of AIDS Drawing methodologies from musicology queer theory critical race studies public health and critical theory the book will be of interest to a wide readership including artists activists musicians historians and other scholars across the humanities as well as to people who lived through the AIDS crisis
