Like its health-related counterpart, perceived age is a global assessment that likely incorporates a range of information about one's current vitality, chronic health conditions, social integration, cognitive functioning, emotional experiences, and family history. Thus, perceived age may be an efficient proxy variable for use in large-scale studies.

Using a variety of research methodologies, this collection of papers focuses broadly on perceived age. In their own words and in the relations among constructs, the ways in which perceived age interacts with and influences well-being are explored. In the present collection of papers, we bring together scholarship from across the globe, including research from Portugal, Iran, Israel, Croatia, and the United States. In many ways, the samples represented have had many unique experiences. But there are commonalities, as well. For some of these adults, the country in which they currently reside may not have been included in world maps when they were infants. For others, they have matured during a time in which more severe lines were drawn regarding sexual expression. Despite the differences across these nations and across the research methodologies employed, results

Taylor,Jeffrey G. Williamson,1994 Between 1870 and 1913 economic convergence among present OECD members or even a wider sample of countries was dramatic about as dramatic as it has been over the past century and a half The convergence can be documented in GDP per worker hour GDP per capita and in real wages What were the sources of the convergence One prime candidate is mass migration In the absence of quotas this was a period of open international migration and the numbers who elected to move were enormous If international migration is ever to play a role in contributing to convergence the pre quota period surely should be it This paper offers some estimates which suggest that migration could account for very large shares of the convergence in GDP per worker and real wages though a much smaller share in GDP per capita One might conclude

therefore that the interwar cessation of convergence could be partially explained by the imposition of quotas and other barriers to migration The paper concludes with caution as it enumerates the possible offsets to the mass migration impact which our partial equilibrium analysis ignores and with the plea that convergence models pay more attention to open economy forces
