The Algebra Of Secondary Cohomology Operations Progress In Mathematics:

The Algebra of Secondary Cohomology Operations Hans-Joachim Baues, 2006-06-12 The algebra of primary cohomology operations computed by the well known Steenrod algebra is one of the most powerful tools of algebraic topology This book computes the algebra of secondary cohomology operations which enriches the structure of the Steenrod algebra in a new and unexpected way The book solves a long standing problem on the algebra of secondary cohomology operations by developing a new algebraic theory of such operations The results have strong impact on the Adams spectral sequence and hence on the computation of homotopy groups of spheres

Simplicial Methods for Higher Categories Simona Paoli, 2019-06-03 This monograph presents a new model of mathematical structures called weak n categories These structures find their motivation in a wide range of fields from algebraic topology to mathematical physics algebraic geometry and mathematical logic While strict n categories are easily defined in terms associative and unital composition operations they are of limited use in applications which often call for weakened variants of these laws The author proposes a new approach to this weakening whose generality arises not from a weakening of such laws but from the very geometric structure of its cells a geometry dubbed weak globularity The new model called weakly globular n fold categories is one of the simplest known algebraic structures yielding a model of weak n categories The central result is the equivalence of this model to one of the existing models due to Tamsamani and further studied by Simpson This theory has intended applications to homotopy theory mathematical physics and to long standing open questions in category theory As the theory is described in elementary terms and the book is largely self contained it is accessible to beginning graduate students and to mathematicians from a wide range of disciplines well beyond higher category theory The new model makes a transparent connection between higher category theory and homotopy theory rendering it particularly suitable for category theorists and algebraic topologists Although the results are complex readers are guided with an intuitive explanation before each concept is introduced and with diagrams showing the interconnections between the main ideas and results

Bulletin of the Belgian Mathematical Society, Simon Stevin, 2008 **Infinite Groups: Geometric, Combinatorial and Dynamical Aspects** Laurent Bartholdi, Tullio Ceccherini-Silberstein, Tatiana Smirnova-Nagnibeda, Andrzej Zuk, 2005-12-09 This book offers a panorama of recent advances in the theory of infinite groups It contains survey papers contributed by leading specialists in group theory and other areas of mathematics Topics include amenable groups Kaehler groups automorphism groups of rooted trees rigidity C algebras random walks on groups pro p groups Burnside groups parafree groups and Fuchsian groups The accent is put on strong connections between group theory and other areas of mathematics

Research in Progress, 1971 Recent Progress in Homotopy Theory Donald M. Davis, 2002 This volume presents the proceedings from the month long program held at Johns Hopkins University Baltimore MD on homotopy theory sponsored by the Japan U S Mathematics Institute JAMI The book begins with historical accounts on the work of Professors Peter Landweber and Stewart Priddy

Central among the other topics are the following 1 classical and nonclassical theory of H spaces compact groups and finite groups 2 classical and chromatic homotopy theory and localization 3 classical and topological Hochschild cohomology 4 elliptic cohomology and its relation to Moonshine and topological modular forms and 5 motivic cohomology and Chow rings This volume surveys the current state of research in these areas and offers an overview of future directions Categorical Decomposition Techniques in Algebraic Topology Gregory Arone, John Hubbuck, Ran Levi, Michael Weiss, 2012-12-06 The book consists of articles at the frontier of current research in Algebraic Topology It presents recent results by top notch experts and is intended primarily for researchers and graduate students working in the field of algebraic topology Included is an important article by Cohen Johnnes and Yan on the homology of the space of smooth loops on a manifold M endowed with the Chas Sullivan intersection product as well as an article by Goerss Henn and Mahowald on stable homotopy groups of spheres which uses the cutting edge technology of topological modular forms Operads in Algebra, Topology and Physics Martin Markl, Steven Shnider, James D. Stasheff, 2002 Operads are mathematical devices which describe algebraic structures of many varieties and in various categories From their beginnings in the 1960s they have developed to encompass such areas as combinatorics knot theory moduli spaces string field theory and deformation quantization **Metric Foliations and Curvature** Detlef Gromoll, Gerard Walschap, 2009-03-28 In the past three or four decades there has been increasing realization that metric foliations play a key role in understanding the structure of Riemannian manifolds particularly those with positive or nonnegative sectional curvature In fact all known such spaces are constructed from only a representative handful by means of metric fibrations or deformations thereof This text is an attempt to document some of these constructions many of which have only appeared in journal form The emphasis here is less on the fibration itself and more on how to use it to either construct or understand a metric with curvature of fixed sign on a given space Proceedings Of The International Congress Of Mathematicians 2010 (Icm 2010) (In 4 Volumes) - Vol. I: Plenary Lectures And Ceremonies, Vols. Ii-iv: Invited Lectures Rajendra Bhatia, Arup Pal, G Rangarajan, V Srinivas, M Vanninathan, 2011-06-06 ICM 2010 proceedings comprises a four volume set containing articles based on plenary lectures and invited section lectures the Abel and Noether lectures as well as contributions based on lectures delivered by the recipients of the Fields Medal the Nevanlinna and Chern Prizes The first volume will also contain the speeches at the opening and closing ceremonies and other highlights of the Congress
