The Alligator Snapping Turtle Biology And Conservation:

The Alligator Snapping Turtle Peter Charles Howard Pritchard, 1989 **Chelonian Conservation and Biology**, 2008 **Biology of Turtles** Jeanette Wyneken, Matthew H. Godfrey, Vincent Bels, 2007-12-26 Featuring in depth contributions from an international team of experts the *Biology of Turtles* provides the first comprehensive review of the Testudinata The book starts with the premise that the structure of turtles is particularly interesting and best understood within the context of their development novelty functional diversity and e *The Ecology, Exploitation and Conservation of River Turtles* Don Moll, Edward O. Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world's river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world's river turtle species *Amphibians and Reptiles of Georgia* John B. Jensen, 2008 Featuring more than 475 full color photographs and 182 maps this comprehensive guide to the state's diverse herpetofauna makes accessible a wealth of information about 170 species of frogs salamanders crocodilians lizards snakes and turtles including species attributes behavior life cycles habitat and more **Nesting Ecology of the Alligator Snapping Turtle (*Macrochelys Temminckii*) Along the Lower Apalachicola River, Florida** Michael Allyn Ewert, 1994 *Conservation Biology* Andrew S. Pullin, 2002-06-27 This colourful textbook introduces students to conservation biology the science of preserving biodiversity **Reproductive Biology and Conservation Genetics of the Alligator Snapping Turtle (*Macrochelys Temminckii*)** Amber R. Teare, 2010 Author's abstract The alligator snapping turtle *Macrochelys temminckii* is a highly aquatic turtle only found in Gulf of Mexico drainages The biology of this species remains relatively unknown despite years of harvest and use as a zoological attraction The purposes of this study were to 1 determine gender size classes and assess sexual size dimorphism 2 delineate the reproductive cycle of *M. temminckii* particularly their sex steroid seasonality and 3 evaluate possible genetic divergence between *M. temminckii* found in southwest Georgia and

northern Florida Alligator snapping turtles exhibit pronounced sexual size dimorphism as adults However determining sex in smaller individuals is difficult The purpose of this study was to assess gender size classes and sexual dimorphism in *Macrochelys temminckii* Alligator snapping turtles in southwest Georgia were trapped from March 2008 to April 2010 Captured turtles were bled sexed based on size and ultrasound and measured for multiple characteristics For all measurements adult males were larger than females The relationships between carapace length plastron to vent length and testosterone levels were used to determine gender of smaller individuals To ensure accurate sexual assignment when studying *M temminckii* data from multiple methods morphological measurements ultrasonography testosterone levels and laparoscopy should be used To delineate the reproductive cycle of *M temminckii* blood samples were taken from captured individuals and plasma testosterone and estradiol were measured using enzyme immunoassay Males exhibited seasonal changes in testosterone levels with maximum levels occurring in October Mating behavior was elucidated from the appearance of wounds on males that only occurred in April Females displayed seasonality in testosterone and estradiol levels with relative peaks occurring in March and April mating and ovulation and September and October follicular development Genetic structure between *M temminckii* populations separated by a dam and under different hunting pressures was assessed using microsatellite loci Average number of alleles per locus and number of unique alleles was higher for the Florida population Genetic structure was detected between the populations $F_{ST} = 0.043$ $p = 0.001$ The rapid development of structuring between Florida and Georgia *M temminckii* warrants further investigation into the effects of fragmentation and overexploitation on this species

Ouachita and Ozark Mountains Symposium, 2004 This volume presents 5 year results of silvicultural treatments associated with ecosystem management research in the Ouachita Mountains of Arkansas Results from stand level treatments include regeneration dynamics of pine and hardwood species effects of treatment on birds and small mammals mast production visual quality oak decline and organic matter Pretreatment landscape findings include measurements of woody vegetation birds mammals and herpetofauna fish communities and trophic structure hydrology and evaluation of susceptibility to gypsy moth outbreaks
