To: Ruth Williams Subject: Alison Daly

You have asked me to look at issues surrounding the estate of the client's late daughter. Lisa, in particular the question of whether the client's granddaughter, Ellie, has any entitlement.

I have identified the following issues and advised on action to take, and options as follows:

#### What is the effect of the will made by Lisa following her father's death?

In the will executed shortly after her father's death, Lisa left her estate to Alson. However, the general sule is that a will is automatically revoked by marriage. Subsequently Lisa married Robert The will is therefore revoked.

#### In Line's subsequent will valid?

Lisa's subsequent will was executed prior to her marriage to Robert. As stated above the general rule is that a will is revoked by marriage. However, there is an exception to the general rule for a will made in contemplation of marriage. For the exception to apply the will must show that at the time of making the will the testator was expecting to marry a particular person (a general expectation of marriage is not sufficient) and the testator must have intended that the will should not be revoked by the subsequent marriage.

The expectation of marriage can be expressed in the will, or it can be implied from the wording of the will. Lisa's will is clear: it expressly anticipates Lisa's marriage to Robert and sets out a clear intention that the will should not be revoked by the marriage.

On the facts it appears that the will fulfill the requirements of the exception. There is nothing to suggest that the will is invalid for want of capacity or intention. There is an attestation clause which raises the presumption of due execution. Lisa's will is therefore valid.

Although estranged, Lisa and Robert were not divorced. A mere separation has no effect on gifts to a spouse in a will.

The book comprises three subjects in which electron correlations in different forms are considered The first focuses on Coulomb interactions for massless Dirac fermions Using a perturbative approach the author reveals emergent Lorentz invariance in a low energy limit and discusses how to probe the Lorentz invariance experimentally The second subject aims to show a principle for synthesizing topological insulators with common light elements The interplay between the spin orbit interaction and electron correlation is considered and Hund's rule and electron filling are consequently found to play a key role for a strong spin orbit interaction important for topological insulators The last subject is classification of topological crystalline insulators in the presence of electron correlation Unlike non interacting topological insulators such two and three dimensional correlated insulators with mirror symmetry are demonstrated to be characterized respectively by the Z4 and Z8 group by using the bosonization technique and a geometrical Study of the Mineral Matter Distribution in Pulverized Fuel Coals with Respect to Slag Deposit Formation consideration in Boiler Furnaces Pennsylvania State University.
