The Apollo Guidance Computer The Apollo Guidance Computer:

The Apollo Guidance Computer Frank O'Brien, 2010-06-25 The technological marvel that facilitated the Apollo missions to the Moon was the on board computer In the 1960s most computers filled an entire room but the spacecraft's computer was required to be compact and low power Although people today find it difficult to accept that it was possible to control a spacecraft using such a primitive computer it nevertheless had capabilities that are advanced even by today's standards This is the first book to fully describe the Apollo guidance computer's architecture instruction format and programs used by the astronauts As a comprehensive account it will span the disciplines of computer science electrical and aerospace engineering However it will also be accessible to the space enthusiast In short the intention is for this to be the definitive account of the Apollo guidance computer Frank O'Brien's interest in the Apollo program began as a serious amateur historian About 12 years ago he began performing research and writing essays for the Apollo Lunar Surface Journal and the Apollo Flight Journal Much of this work centered on his primary interests the Apollo Guidance Computer AGC and the Lunar Module These Journals are generally considered the canonical online reference on the flights to the Moon He was then asked to assist the curatorial staff in the creation of the Cradle of Aviation Museum on Long Island New York where he helped prepare the Lunar Module simulator a LM procedure trainer and an Apollo space suit for display He regularly lectures on the Apollo computer and related topics to diverse groups from NASA's computer engineering conferences the IEEE ACM computer festivals and university student groups

Journey to the Moon, 1996 **Journey to the Moon** Albert C. Piccirillo, 1996 **Digital Apollo** David A. Mindell, 2011-09-30 The incredible story of how human pilots and automated systems worked together to achieve the ultimate achievement in flight the lunar landings of NASA's Apollo program As Apollo 11's Lunar Module descended toward the moon under automatic control a program alarm in the guidance computer's software nearly caused a mission abort Neil Armstrong responded by switching off the automatic mode and taking direct control He stopped monitoring the computer and began flying the spacecraft relying on skill to land it and earning praise for a triumph of human over machine In Digital Apollo engineer historian David Mindell takes this famous moment as a starting point for an exploration of the relationship between humans and computers in the Apollo program In each of the six Apollo landings the astronaut in command seized control from the computer and landed with his hand on the stick Mindell recounts the story of astronauts' desire to control their spacecraft in parallel with the history of the Apollo Guidance Computer From the early days of aviation through the birth of spaceflight test pilots and astronauts sought to be more than spam in a can despite the automatic controls digital computers and software developed by engineers Digital Apollo examines the design and execution of each of the six Apollo moon landings drawing on transcripts and data telemetry from the flights astronaut interviews and NASA's extensive archives Mindell's exploration of how human pilots and automated systems worked together to achieve the ultimate in flight a lunar landing traces and reframes the debate over the future of humans and automation in

space The results have implications for any venture in which human roles seem threatened by automated systems whether it is the work at our desktops or the future of exploration *Apollo's Computers* Patrick Stakem, 2018-03-05 Apollo was built in the era of big iron computer mainframes The concept of an onboard computer for space missions was radically new There was only one place in the world that could design the Apollo Guidance Computers and that was MIT It took most of the U S s production of integrated circuits another radical idea replacing individual vacuum tubes to build the AGC s It took 2 000 person years of independent code review and validation to ensure that they would operate properly Besides the technical challenges the Apollo missions were a matter of National Prestige In the Space Race between the United States and the Soviet Union President Kennedy said we were going to the Moon and return safely before the end of the 1960 s decade so we did The flight computers for the Saturn launch vehicle were an evolution of earlier missile guidance efforts The massive Saturn V first stage was built from clustered Jupiter rockets The earlier and smaller Saturn I was built of clustered Redstone rockets which were themselves a derivative of the early German V 2 rockets by the Von Braun Team The Saturn s upper stages were all new technology using liquid hydrogen and oxygen The vehicle had to achieve and maintain a precise trajectory from its launch site in Florida to lunar orbit to the lunar surface and back and then return to Earth All this took unprecedented computing power This book is a brief synopsis of the architecture and applications of the Apollo computers There is a lot of archived material on the topic and the list of references in this book is a good starting point The amazing thing is the first computer on another world was designed and built before computers were commodity items It worked as planned Although your phone has more computing power than the entire Saturn vehicle you shouldn t trust it to get you to the moon and back **Case History of the Apollo Guidance Computer** Eldon C.
