the current average distribution would result in size and species diversity similar to that of an unmanaged stand From a financial point of view the q factor guide and a 13 in 330 mm diameter limit cut would be superior to the average current management regime The diameter limit regime would have the greatest effect on lowering tree size diversity and an effect on species diversity similar to that of the q factor guide A computer program SOUTHPRO was developed to simulate the effects of other management alternatives Distribution Data Guide ,1959 **Guide to Programs** National Science Foundation (U.S.),1994
