

To fix the Programmer to the Backplate

In the skirt round the back of the programmer are four knockouts. Break out the position needed to clear the wires entering the backplate (only required for surface wiring.)

Slacken the captive screw at the top of the backplate (see Illustration 6), tilt the top of the programmer forward and hook the slots at the bottom of the programmer over the projecting lugs on the backplate. Swing the programmer back onto the backplate, engaging the pins on the programmer with the connectors on the backplate, press firmly home and tighten the securing screw at the top.

Programme Setting and Checking

Set the room and cylinder thermostats (if fitted) and boiler thermostat to their highest temperature settings. Set central heating and hot water sliders to twice. Rotate the dial by hand in a clockwise direction and check that the pump and boiler switch on and off at the relevant tappet operations. Remember that motorised valves take time to reach new programme positions.

When checks are complete return all thermostats to their normal settings.
