Symmetric Spaces And The Kashiwara Vergne Method Lecture Notes In Mathematics:

Symmetric Spaces and the Kashiwara-Vergne Method François Rouvière, 2014-10-14 Gathering and updating results scattered in journal articles over thirty years this self contained monograph gives a comprehensive introduction to the subject Its goal is to motivate and explain the method for general Lie groups reducing the proof of deep results in invariant analysis to the verification of two formal Lie bracket identities related to the Campbell Hausdorff formula the Kashiwara Vergne conjecture give a detailed proof of the conjecture for quadratic and solvable Lie algebras which is relatively elementary extend the method to symmetric spaces here an obstruction appears embodied in a single remarkable object called an e function explain the role of this function in invariant analysis on symmetric spaces its relation to invariant differential operators mean value operators and spherical functions give an explicit e function for rank one spaces the hyperbolic spaces construct an e function for general symmetric spaces in the spirit of Kashiwara and Vergne's original work for Lie groups The book includes a complete rewriting of several articles by the author updated and improved following Alekseev Meinrenken and Torossian's recent proofs of the conjecture The chapters are largely independent of each other Some open problems are suggested to encourage future research It is aimed at graduate students and researchers with a basic knowledge of Lie theory

Geometric Analysis on Symmetric Spaces Sigurdur Helgason, 2024-09-27 This book gives the first systematic exposition of geometric analysis on Riemannian symmetric spaces and its relationship to the representation theory of Lie groups The book starts with modern integral geometry for double fibrations and treats several examples in detail After discussing the theory of Radon transforms and Fourier transforms on symmetric spaces inversion formulas and range theorems Helgason examines applications to invariant differential equations on symmetric spaces existence theorems and explicit solution formulas particularly potential theory and wave equations The canonical multitemporal wave equation on a symmetric space is included The book concludes with a chapter on eigenspace representations that is representations on solution spaces of invariant differential equations Known for his high quality expositions Helgason received the 1988 Steele Prize for his earlier books *Differential Geometry Lie Groups and Symmetric Spaces* and *Groups and Geometric Analysis* Containing exercises with solutions and references to further results this revised edition would be suitable for advanced graduate courses in modern integral geometry analysis on Lie groups and representation theory of Lie groups

Geometric Analysis on Symmetric Spaces Phillip Griffiths, Sigurdur Helgason, 1989 This book gives the first systematic exposition of geometric analysis on Riemannian symmetric spaces and its relationship to the representation theory of Lie groups The book starts with modern integral geometry for double fibrations and treats several examples in detail After discussing the theory of Radon transforms and Fourier transforms on symmetric spaces inversion formulas and range theorems Helgason examines applications to invariant differential equations on symmetric spaces existence theorems and explicit solution formulas particularly potential theory and wave equations The canonical

multitemporal wave equation on a symmetric space is included The book concludes with a chapter on eigenspace representations that is representations on solution spaces of invariant differential equations BOOK JACKET Holomorphy and Convexity in Lie Theory Karl-Hermann Neeb, 2000 The aim of the Expositions is to present new and important developments in pure and applied mathematics Well established in the community over more than two decades the series offers a large library of mathematical works including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers interested in a thorough study of the subject Editorial Board Lev Birbrair Universidade Federal do Cear Fortaleza Brasil Walter D Neumann Columbia University New York USA Markus J Pflaum University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany Katrin Wendland University of Freiburg Germany Honorary Editor Victor P Maslov Russian Academy of Sciences Moscow Russia Titles in planning include Yuri A Bahturin Identical Relations in Lie Algebras 2019 Yakov G Berkovich Lev G Kazarin and Emmanuel M Zhmud Characters of Finite Groups Volume 2 2019 Jorge Herbert Soares de Lira Variational Problems for Hypersurfaces in Riemannian Manifolds 2019 Volker Mayer Mariusz Urbański and Anna Zdunik Random and Conformal Dynamical Systems 2021 Ioannis Diamantis Bostjan Gabrovsek Sofia Lambropoulou and Maciej Mroczkowski Knot Theory of Lens Spaces 2021

subjects Weyl made profound contributions to a wide range of areas including analysis geometry number theory Lie groups and mathematical physics as well as the philosophy of science and of mathematics The topics he chose to study the lines of thought he initiated and his general perspective on mathematics have proved remarkably fruitful and have formed the basis for some of the best of modern mathematical research This volume contains the proceedings of the AMS Symposium on the Mathematical Heritage of Hermann Weyl held in May 1987 at Duke University In addition to honoring Weyl's great accomplishments in mathematics the symposium also sought to stimulate the younger generation of mathematicians by highlighting the cohesive nature of modern mathematics as seen from Weyl's ideas The symposium assembled a brilliant array of speakers and covered a wide range of topics All of the papers are expository and will appeal to a broad audience of mathematicians theoretical physicists and other scientists
