Achieving sustainable cultivation of rice Volume 2 Prof. Takuji Sasaki, 2017-05-22 Summarises advances in cultivation practices to close yield gaps including more efficient irrigation and nutrition techniques Discusses innovative methods of climate smart cultivation such as integrated crop management and the system of rice intensification SRI Reviews the latest research on insect pests weeds and integrated pest management Biological Approaches to Regenerative Soil Systems Norman Uphoff, Janice Thies, 2023-10-27 Agriculture in the 21st century will need considerable modification to remain both productive and sustainable Greater production is needed to meet the needs of our still growing populations and to combat hunger and poverty Declines in soil health and the pollution of water sources are making many of our production systems less tenable These adverse trends are exacerbated more and more by the impacts of climate change There are fortunately alternative methods available for agricultural practice that can countervail these constraints Biological Approaches to Regenerative Soil Systems brings together the work of both researchers and practitioners to map out better approaches to contemporary agriculture that draw upon both old and new knowledge It presents the science that underlies more biologically driven strategies as well as contemporary innovative experiences in diverse parts of the world Both accepted research and these varied experiences encourage confidence that these approaches not relying primarily on the introduction of new varieties and on exogenous inputs can succeed This book updates and revises a preceding volume Biological Approaches to Sustainable Soil Systems published by CRC Press in 2006 So much has been learned and done on this subject in the past decade and a half that a second edition was warranted For instance the first edition was published knowledge about plant soil microbiomes which are a frequent focus in this book has mushroomed Because sustainability is a broad term and an end state the editors preferred to assemble expertise regarding regenerative agriculture which is concerned with the means for achieving sustainability The concept of regenerative soil systems entities that are more complex and multifaceted than soil alone also incorporates a concern with having more resilient agricultural systems ones that are better able to cope with the multiple stresses of climate change that are foreseen for the decades ahead The book's chapters representing a wide range of disciplines were contributed by 84 scientists and practitioners from 20 countries Although they come from persons with in depth knowledge of their respective fields the chapters are written to be accessible to readers who are not trained in the specialized subjects Taken together the chapters provide students researchers practitioners planners and policy makers with a comprehensive understanding of both the science and the steps needed to regenerate and sustain soil systems around the world for the long term benefit of humankind and the environment

approach to enhancing rice production at affordable costs by simultaneously reducing input requirements and causing less harm to the environment The SRI approach is expected to enhance yield and substantially reduce water and other input requirements by altering plant soil water and nutrient management practices With SRI taking firm root in India the book examines and analyses the adoption and the economic impact of SRI in three major rice producing States of India Karnataka Madhya Pradesh and Orissa

Sustaining Global Food Security Robert Zeigler, 2019-10-09 Population growth alone dictates that global food supplies must increase by over 50% in coming decades Advances in technology offer an array of opportunities to meet this demand but history shows that these can be fully realised only within an enabling policy environment Sustaining Global Food Security makes a compelling case that recent technological breakthroughs can move the planet towards a secure and sustainable food supply only if new policies are designed that allow their full expression Bob Zeigler has brought together a distinguished set of scientists and policy analysts to produce well referenced chapters exploring international policies on genetic resources molecular genetics genetic engineering crop breeding and protection remote sensing the changing landscape of agricultural policies in the world's largest countries and trade Those entering the agricultural sciences and those who aspire to influence public policy during their careers will benefit from the insights of this unique set of experiences and perspectives
