Systems Science And Modeling For Ecological Economics:

Systems Science and Modeling for Ecological Economics Alexey A. Voinov, 2010-07-27 Modeling is a key component to sciences from mathematics to life science including environmental and ecological studies By looking at the underlying concepts of the software we can make sure that we build mathematically feasible models and that we get the most out of the data and information that we have Systems Science and Modeling for Ecological Economics shows how models can be analyzed using simple math and software to generate meaningful qualitative descriptions of system dynamics This book shows that even without a full analytical mathematically rigorous analysis of the equations there may be ways to derive some qualitative understanding of the general behavior of a system By relating some of the modeling approaches and systems theory to real world examples the book illustrates how these approaches can help understand concepts such as sustainability peak oil adaptive management optimal harvest and other practical applications Relates modeling approaches and systems theory to real world examples Teaches students to build mathematically feasible models and get the most out of the data and information available Wide range of applications in hydrology population dynamics market cycles sustainability theory management and more Ecological-Economic Modelling for Biodiversity Conservation Martin Drechsler, 2020-03-26

Ecosystem Management Fred B. Samson, Fritz L. Knopf, 2013-12-01 Ecosystem management has emerged in the past several years as the new paradigm for managing public and private land It combines the principles of ecosystem level ecology with the policy requirements of resource and public land management This collection of selected readings will serve as an introduction to the concepts of biological diversity ecological process biotic integrity and ecological sustainability that underlie ecosystem management

Ecological States Jesse Rodenbiker, 2023-06-15 Ecological States examines ecological policies in the People s Republic of China to show how campaigns of scientifically based environmental protection transform nature and society While many point to China s ecological civilization programs as a new paradigm for global environmental governance Jesse Rodenbiker argues that ecological redlining extends the reach of the authoritarian state Although Chinese urban sustainability initiatives have driven millions of citizens from their land and housing Rodenbiker shows that these migrants are not passive subjects of state policy Instead they creatively navigate resettlement processes in pursuit of their own benefit However their resistance is limited by varied forms of state backed infrastructural violence Through extensive fieldwork with scientists urban planners and everyday citizens in southwestern China Ecological States exposes the ways in which the scientific logics and practices fundamental to China s green urbanization have solidified state power and contributed to dispossession and social inequality With support from the Henry Luce Foundation our goal is to produce all titles in this series both in Open Access for reasons of global accessibility and equity as well as in print editions
