Smart External Stimulus-Responsive Nanocarriers for Drug and Gene Delivery Mahdi Karimi, Parham Sahandi Zangabad, Amir Ghasemi, Michael R Hamblin, 2015-12-01 The concept of smart drug delivery vehicles involves designing and preparing a nanostructure or microstructure that can be loaded with a cargo this can be a therapeutic drug a contrast agent for imaging or a nucleic acid for gene therapy The nanocarrier serves to protect the cargo from degradation by enzymes in the body to enhance the solubility of insoluble drugs to extend the circulation half life and to enhance its penetration and accumulation at the target site Importantly smart nanocarriers can be designed to be responsive to a specific stimulus so that the cargo is only released or activated when desired In this volume we cover smart nanocarriers that respond to externally applied stimuli that usually involve application of physical energy This physical energy can be applied from outside the body and can either cause cargo release or can activate the nanostructure to be cytotoxic or both The stimuli covered include light of various wavelengths ultraviolet visible or infrared temperature increased or decreased magnetic fields used to externally manipulate nanostructures and to activate them ultrasound and electrical and mechanical forces Finally we discuss the issue of nanotoxicology and the future scope of the field

Smart Internal Stimulus-Responsive Nanocarriers for Drug and Gene Delivery Mahdi Karimi, Parham Sahandi Zangabad, Amir Ghasemi, Michael R Hamblin, 2015-12-01 The concept of smart drug delivery vehicles involves designing and preparing a nanostructure or microstructure that can be loaded with a cargo This can be a therapeutic drug a contrast agent for imaging or a nucleic acid for gene therapy The nanocarrier serves to protect the cargo from degradation by enzymes in the body to enhance the solubility of insoluble drugs to extend the circulation half life and to enhance its penetration and accumulation at the target site Importantly smart nanocarriers can be designed to be responsive to a specific stimulus so that the cargo is

only released or activated when desired In this volume we cover smart nanocarriers that respond to internal stimuli that are intrinsic to the target site These stimuli are specific to the cell type tissue or organ type or to the disease state cancer infection inflammation etc pH responsive nanostructures can be used for cargo release in acidic endosomal compartments in the lower pH of tumors and for specific oral delivery either to the stomach or intestine Nanocarriers can be designed to be substrates of a wide range of enzymes that are over expressed at disease sites Oxidation and reduction reactions can be taken advantage of in smart nanocarriers by judicious molecular design Likewise nanocarriers can be designed to respond to a range of specific biomolecules that may occur at the target site In this volume we also cover dual and multi responsive systems that combine stimuli that could be either internal or external
