Successes and Limitations of Targeted Cancer Therapy R.A., Stahel, S., Peters, 2014-03-18 The treatment of patients with advanced malignancies has undergone remarkable change in the last few years While in the past decisions about systemic therapy were largely based on the performance status of a patient oncologists today also take into account the pathological and molecular characteristics of the patient's tumor Targeting specific molecular pathways important for tumorigenesis has become the preferred way of treatment for many types of malignancies With these advances come new challenges including the optimization of therapy recognizing and dealing with side effects and importantly the development of resistance This book provides an up to date overview of the advances and limitations of targeted therapy for several tumor entities including breast cancer colon cancer gastrointestinal stromal tumors lung cancer melanoma ovarian cancer and renal cell carcinoma Written by over a dozen internationally renowned scientists the book is suitable for advanced students postdoctoral researchers scientists and clinicians who wish to update their knowledge of the latest approaches to targeted cancer therapies

Advances in Targeted Cancer Therapy Richard M. Schultz, 2006-01-24 There have been tremendous advances in our understanding of molecular and tumor biology during the past few years In the field of cancer therapeutics it is expected that cytotoxic drug

approaches will be gradually replaced with treatments based on biological targeted approaches. Hopefully these new targeted therapies will significantly increase efficacy and lack the devastating and troublesome side effects elicited by cytotoxic chemotherapy. This volume is the first book to cover the general topic of targeted cancer therapy. It presents a range of targets such as tumor angiogenesis, cell cycle control and cell signalling, COX 2, apoptosis, cell survival, invasion and metastasis, and approaches like kinase inhibitors, antisense and antibody based therapeutics. The emphasis is on preclinical development including target validation, development of biomarkers, strategies for combination approaches and development of resistance. The particular challenges involved in translating these data to clinical application are discussed. This volume should be of broad general interest to researchers and clinicians involved in cancer therapy as well as other scientists interested in current strategies for cancer treatment.

Targeted Therapies for Solid Tumors Antonio Russo, Rafael Rosell, Christian Rolfo, 2015-03-11. This volume provides readers a comprehensive and state of the art overview about the range of applications of targeted therapies for solid tumors. The sections of the book have been structured to review the oncogene addicted tumors, the pharmacology and clinical development of new molecularly targeted agents, the use of biomarkers as prognostic, predictive and surrogate endpoints and the evaluation of tumor response and specific malignancies treated with targeted agents. The book also covers some of the newest developments in cancer therapy that are not adequately covered by any current available literature. Written by recognized experts in the field, **Targeted Therapies for Solid Tumors: A Handbook for Moving Toward New Frontiers in Cancer Treatment** provides a unique and valuable resource in the field of molecular oncology both for those currently in training and for those already in clinical or research practice.

Targeted Cancer Therapy Razelle Kurzrock, Maurie Markman, 2008-03-07. Emerging technologies in target identification, drug discovery, molecular markers and imaging are rapidly changing the face of cancer. This book provides a foundation of knowledge in targeted cancer therapeutics. The treatment of cancer is increasingly being individualized based on an understanding of underlying biologic mechanisms. Poised to change the landscape in oncology, this volume provides a state of the art overview. It will be valuable to practicing and academic physicians, fellows, residents and students as well as basic scientists interested in the cancer field.

Soares, 2021-02-24 This work covers the pathophysiology of cancer exploring the difficulty of optimal treatment due to the complexity and diversity of cancer types The search for distinctive molecular biology characteristics of tumor cells is especially relevant in the identification of overexpressed receptors and proteins that can be used as a target for cancer treatment We highlight the main therapeutic modalities particularly conventional systemic chemotherapy addressing its mechanisms of action therapeutic classes and even the toxic effects We also describe the main tumor markers their importance in the diagnosis and treatment of cancer and the specificity of tumor cells The first chapters serve as an introduction to the central topic of this book targeted therapy Key aspects of target therapy such as classes of drugs immunotherapy monoclonal antibodies checkpoint inhibitors cancer vaccines and tyrosine kinase inhibitors are presented and for each one the benefits as well as the adverse effects are reported Chapter 6 compares conventional systemic chemotherapy and targeted therapy identifies the risks and benefits and also the eligibility criteria for patient care The possibility of targeted therapy replacing conventional chemotherapy is discussed while reviewing studies that demonstrate the benefits of combining both types of treatment Finally the introduction of pharmaceutical nanotechnology to improve antineoplastic agents is addressed in the last chapter and sets the direction for future research in cancer treatment This is a valuable resource for many health professionals including physicians pharmacists nurses researchers and students interested in the field of oncology *MicroRNA Targeted Cancer Therapy* Fazlul H. Sarkar, 2014-04-22 Since the discovery of

microRNAs miRNAs some twenty years ago by Victor Ambros David Baulcombe and Gary Ruvkun these three scientists worked to uncover the mystery of miRNA the small segments of nucleotides that silence genes While studying the development of the nematode worm Ambros and Ruvkun discovered miRNA in animals while Baulcombe discovered it in plants Since their discovery it took more than two decade to fully appreciate the value of miRNA in human health and diseases Emerging evidence suggest that the activation of oncogenes and or the inactivation of tumor suppressor genes contribute to the development and progression of tumors The regulation of genes is by far controlled by many transcription factors which are often deregulated during the development and progression of cancer In addition emerging evidence clearly suggests that the deregulation of miRNAs or small non coding RNAs could also regulate the expression of genes and likewise miRNA genes are also regulated by transcription factors The most attractive feature of miRNAs is that one miRNA can regulate many target genes mRNAs and thus miRNA targeted therapy is highly promising because multiple genes could be regulated by targeting a single miRNA which becomes very important for the killing of highly heterogeneous populations of cancer cells within a tumor mass Therefore miRNA targeted therapy is an attractive attribute of miRNA research which is covered through eighteen chapters complied in this book MicroRNA targeted Cancer therapy and it is hoped that the field of

miRNA research will be appreciated through critical reading of these chapters on the cutting edge research on miRNAs
