linear reality of the world At once problem and prize systemicity continues to confound This book details the mechanics of this paradox as they arise from human epistemological engagement with the world Guided by an original analysis of the fundamental idea of emergent property Thinking Through Systems Thinking uncovers the distinct significance but also incompleteness of the systems approach as a theory of human epistemological engagement The incompleteness is treated through a non eclectic interdisciplinary investigation which meets ten distinctly developed criteria required of any potential interdisciplinary partner to systems thinking There results a theory of knowledge an epistemology which is systemic in both senses of the term it belongs to the general systems movement and it is systemically structured The systems movement is thus offered a distinct epistemological voice which can compete on equal ground with other philosophical epistemological positions In true systemic fashion this theory of knowledge also offers methodological ethical and existential implications
