Systems Approaches To Developmental Neurobiology Nato Science Series A:

Systems Approaches to Developmental Neurobiology Pamela A. Raymond, Stephen S. Easter Jr., Giorgio M. Innocenti, 2012-12-06 It is appropriate at the outset of this book to pose a question that was often asked of the organizers before the meeting took place and later among those who participated in the meeting What is meant by Systems Approaches in the study of developmental neurobiology The answer as we originally conceived it can be succinctly summarized by the word interactions That brief epithet was expanded during the general discussion portion of the meeting where the following definition was offered Systems approaches in developmental neurobiology are unified by attention to the emergent properties of the developing system under investigation and by a focus on the aspects of development of the nervous system that depend on interactions among its various elements be they molecular intracellular or multicellular As opposed to ignoring complexity or trying to wish it away those of us who utilize a systems approach embrace the principle that complexity is what makes the nervous system special We have come to recognize that wherever we look we find interactions which are to be probed and eventually understood Even the so called simple systems a term that has been used to describe many invertebrate preparations are embraced under the above definition since with further study it is becoming increasingly clear that such systems are not as simple as once thought We also include molecular genetics under the systems rubric After all genes regulate other genes which regulate others and so it goes **Current Catalog** National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Biomechanical Transport Processes** Charles Baquay, 2014-11-14 Proceedings of a NATO ARW held in Cargese France October 9 13 1989 **American Book Publishing Record**, 2004 **Experimental Embryology in Aquatic Plants and Animals** Hans-Jurg Marthy, 2012-12-06 The NATO Advanced Study Institute on Experimental Embryology in Aquatic Plant and Animal Organisms was attended by more than 70 participants including 15 invited main lecturers from 18 different countries In accordance with the main purpose of the meeting senior scientists postdoctoral investigators and graduate students working in areas of descriptive and experimental embryology classical molecular and developmental biology physiology and biochemistry etc were brought together for two weeks as a community with a strong common interest in development that is the multiple phenomena and mechanisms in molecular cellular genetic and organismic terms observed in the development of aquatic organisms Initial concern that the great variety of biological models as well as of research subjects would harm the scientific quality and coherency of the course was unnecessary It was exactly this breadth which made the Institute worthwhile for each of the participants Since many of the students were younger scientists starting a career it was the main goal of the course to offer a concise overview of selected system models of primarily aquatic organisms and to present and discuss research carried out in the past and in progress Thus each main speaker gave two in depth lectures one in which he presented an overview of his model and another dealing with current

investigations **Sensory Abilities of Cetaceans** Jeanette A. Thomas, Ronald A. Kastelein, 2013-11-11 This book evolved through the efforts of several organizations and the dedication of many individuals In 1987 we received a request to propose a workshop topic for the Fifth International Theriological Congress ITC to be held in August 1989 in Rome Italy After looking up the meaning of the word theriological in the dictionary and discovering that it pertains to mammalian behavior we decided a symposium on sensory abilities of whales and dolphins would be an interesting topic The ITC convenes only every five years and has the distinction of being very well attended by scientists from around the world We thought that hosting a workshop in conjunction with the ITC would attract a variety of international scientists that rarely have the opportunity to interact Fortunately for all involved our prediction was correct The first two days of the workshop 23-24 August 1989 were held in conjunction with ITC and the nearly 1 000 attending scientists were able to view our posters and listen to lectures The third day was limited to only about 65 invited scientists who were divided into topical working groups chaired by a rapporteur

Sensory Transduction Antonio Borsellino, Luigi Cervetto, Vincent Torre, 2012-12-06 Present knowledge of the mechanisms underlying any single sensory modality is so massive as to discourage effort directed towards completeness The idea underlying the structure of this volume on Sensory transduction was to select just a few topics of general interest which are currently being investigated and for which a reasonably clear picture is now available During the last five years there has been a revolution in the way sensory physiologists think about transduction and a series of exciting advances have been made in understanding the basic processes of phototransduction chemotransduction and mechanotransduction It is clear that in many cases the fundamental processes by which nature attains optimization of performance are similar and that they have much in common with more general processes of signal recognition by living structures The molecular events underlying the detection of photons by visual cells the recognition of a given molecule by a chemoreceptor or the level of a hormone in the extracellular fluid by a target cell are all very similar and involve the activation of a sequence of events leading to a second messenger The 20 papers that form the present volume cover various topics in the field of sensory transduction They originate from the lectures seminars and discussions which made up the XVIII Course of the International School of Biophysics held in Erice 9th-19th June 1988 The Cumulative Book Index , 1999 NATO Science Programme Yearbook Compendium, 1985-1989 , 1989
