Spatial Interaction Modelling A Regional Science Context Advances In Spatial Science:

Spatial Interaction Modelling John R. Roy, 2012-09-22 In this book the author's strong commitment to the multi disciplinary field of regional science emerges to provide a unifying framework between spatial modelling traditions from quantitative geography and those from spatial economics whereby each is enhanced Starting with a detailed discussion of each field illustrated with numerical examples the two traditions are brought together by either making the economic models probabilistic or transforming the objectives of the geographic models to reflect both utility theory and production theory The ideas are applied to develop urban models of activity analysis face to face contacts and housing supply as well as regional models in the areas of input output analysis imperfect competition and interregional migration Handbook of Spatial Analysis in the Social Sciences Sergio J. Rey, Rachel S. Franklin, 2022-11-18 Providing an authoritative assessment of the current landscape of spatial analysis in the social sciences this cutting edge Handbook covers the full range of standard and emerging methods across the social science domain areas in which these methods are typically applied Accessible and comprehensive it expertly answers the key questions regarding the dynamic intersection of spatial analysis and the social sciences

Fifty Years of Regional Science Raymond Florax, David A. Plane, 2013-04-17 This book contains the complete text of the special Golden Anniversary issue of the flagship journal of the Regional Science Association International *RSAI Papers in Regional Science* Volume 83 Number 1 as well as the full text of Walter Isard's Presidential Address The future near and far of regional science Professor Isard originally delivered the speech in a special plenary session of the fiftieth North American Meetings of the Regional Science Association International The session began with a ceremonial kickoff to the year long celebration of the multidisciplinary field's first 50 years At the ceremony held on the morning of Friday November 21 2004 at the DoubleTree Hotel in Philadelphia we presented Walter Isard the founder of our multidisciplinary field as well as Antoine Bailly the President of the Regional Science Association International and David Boyce the Association's Archivist with commemorative first copies of the anniversary issue This book entitled *Fifty Years of Regional Science* consists of a compendium of thought papers authored by a representative sampling of some of the field's leading scholars For the special journal issue we originally titled the collection *The Brightest of Dawns* New Directions in Regional Economic Development Charlie Karlsson, Ake E. Andersson, Paul C. Cheshire, Roger R. Stough, 2009-07-28 This book examines emerging hypotheses new methods and theoretic developments in regional economic development It offers a diverse set of case studies ranging from a focus on Europe Central and East Asia and North America *Regional Science in Business* Graham Clarke, Moss Madden, 2013-03-09 Graham Clarke and Moss Madden 1 1 Background In the mid 1990s there were a number of papers in regional science that questioned the relevance and purpose of the entire sub discipline Bailly and Coffey 1994 for example talked of regional science in crisis They argued that there were two fundamental problems First regional science was too theoretical in the sense that many of its products were models that could neither be calibrated too

complex or operationalised too abstract in the real world They suggested that regional science had not sufficiently demonstrated that it can address real world problems and subsequently lacked a focus on relevant policy issues Second they argued that regional science had become too narrow in focus and had moved away too far from real people and their daily concerns or struggles in life This was not the first time we had witnessed these sorts of arguments both from outside the discipline and from within Sayer 1976 was perhaps the first to argue for a shift from a model based focus in regional science to one based on political economy Breheny 1984 criticised the deep ignorance among regional scientists of the nature of practical policy making and implementation see also Rodwin 1987 for similar views in the mid 1980s Such self reflection is a feature of many disciplines as they reach maturity There have been many similar reflections in geography Johnston 1996 Barnes 1996 and economics see the collection in the January edition of the Economic Journal 1991
