Stem Cell Wars Inside Stories From The Frontlines:

Stem Cell Wars Eve Herold, George Daley, 2015-10-16 Americans have become the victims of misinformation about stem cell research Over the last few years the stem cell debate has been intensely political religious and confusing to many people Now Eve Herold explains what this science is all about who is for and against it and why it must go forward She pulls together fascinating stories to highlight every aspect of this multifaceted field She exposes the politics of stem cell research and demonstrates how the outcome of the debate could ultimately affect all of us Packed with real life stories of the people caught up in this groundbreaking struggle *Stem Cell Wars* cuts through the noise and sets the standard for future debate

Lynch's *What Are Stem Cells* identifies the moral stalemate between the rights of the embryo and the rights of the patient and uses it as the framework for a larger discussion about the role of definitions as a key rhetorical strategy in the debate. In the case of stem cells, the controversy arises from the manner in which stem cells are defined in particular whether they are defined with an appeal to their original source or to their future application. Definitions such as these, Lynch argues, are far more than convenient expository references; they determine the realities of any given social discourse. Lynch addresses definitions conceptually, their stability in the face of continual technological innovation, their versatility at the crossroads of scientific and public forums, and their translations and retranslations through politics. Most importantly, his work recognizes definitions as central to issues not only within the topic of stem cell research but also in all argumentation.

Test Tube Families Naomi R. Cahn, 2009-01-01. The birth of the first test tube baby in 1978 focused attention on the sweeping advances in assisted reproductive technology (ART), which is now a multi-billion dollar business in the United States. Sperm and eggs are bought and sold in a market that has few barriers to its skyrocketing growth. While ART has been an invaluable gift to thousands of people creating new families, the use of someone else's genetic material raises complex legal and public policy issues that touch on technological anxiety, eugenics, reproductive autonomy, identity, and family structure. How should the use of gametic material be regulated? Should recipients be able to choose the best sperm and eggs? Should a child ever be able to discover the identity of her gamete donor? Who can claim parental rights? Naomi R. Cahn explores these issues and many more in *Test Tube Families*, noting that although such questions are fundamental to the new reproductive technologies, there are few definitive answers currently provided by the law, ethics, or cultural norms. As a new generation of donor kids comes of age, Cahn calls for better regulation of ART, exhorting legal and policy-making communities to cease applying piecemeal laws and instead create legislation that sustains the fertility industry while simultaneously protecting the interests of donors, recipients, and the children that result from successful transfers.

Biotechnology and Genetic Engineering Kathy Wilson Peacock, 2010. Explains why biotechnology is a relevant and volatile issue. Begins with a history of biotechnology and its effect on agriculture, medicine, and the environment. Equal space is devoted to discussing the efforts of human rights advocates, animal rights advocates, and environmentalists to create definitive governmental regulations for this budding industry.

Molecular Theory of the Living Cell Sungchul Ji, 2012-04-05. The book presents the first comprehensive molecular theory of the living cell ever published since the cell doctrine was formulated in 1838-1839. It introduces into cell biology over thirty key concepts, principles, and laws imported from physics, chemistry, computer science, linguistics, semiotics, and philosophy. The author formulates physically, chemically, and enzymologically realistic molecular mechanisms to account for basic living processes such as ligand-receptor interactions, enzymic catalysis, force-generating mechanisms in molecular motors, chromatin remodelling, and signal transduction. Possible solutions to basic and practical problems facing contemporary biology and biomedical sciences have been suggested, including pharmacotherapeutics and personalized

Cognitive Foundations of Linguistic Usage Patterns

Hans-Jörg Schmid, Susanne Handl, 2010 Main description There is an increasing awareness in linguistics that linguistic patterns can be explained with recourse to general cognitive processes The contributions collected in this volume pursue such a usage based cognitive linguistic approach by presenting empirical investigations of lexical and grammatical patterns and probing into their implications for the relations between language structure use and cognition **Communicating**

Biological Sciences Richard Elliott, 2016-05-23 Recent scandals in the biosciences have highlighted the perils of communicating science leading many observers to ask questions about the pressures on scientists and the media to hype up claims of scientific breakthroughs Journalists science writers and scientists themselves have to report complex and rapidly developing scientific issues to society yet work within conceptual and temporal constraints that shape their communication To date there has been little reflection on the ethical implications of science writing and science communication in an era of rapid change Communicating Biological Sciences discusses the ethics of science communication in light of recent developments in biotechnology and biomedicine It focuses on the role of metaphors in the creation of visions and the framing of scientific advances as well as their impact on patterns of public acceptance and rejection trust and scepticism Its rigorous investigation will appeal not only to science writers and scientists but also to scholars of sociology science and technology studies media and journalism **The American Biology Teacher** , 2007-08
