System Design Modeling and Metamodeling John P. van Gigch, 2013-06-29 This book is a venture in the worlds of modeling and of metamodeling At this point I will not reveal to readers what constitutes metamodeling Suffice it to say that the pitfalls and shortcomings of modeling can be cured only if we resort to a higher level of inquiry called meta inquiry and metadesign We reach this level by the process of abstraction The book contains five chapters from my previous work Applied General Systems Theory Harper and Row London and New York First Edition 1974 Second Edition 1978 More than ten years after its publication this material still appears relevant to the main thrust of system design This book is dedicated to all those who are involved in changing the world for the better In a way we all are involved in system design from the city manager who struggles with the problems of mass transportation or the consolidation of a city and its suburbs to the social worker who tries to provide benefits to the urban poor It includes the engineer who designs the shuttle rockets It involves the politician engaged in drafting a bill to recycle containers or one to prevent pesticide contamination of our food The politician might even need system design to chart his or her own re election campaign

Systems Design John P. Van Gigch, 1988 *Systems Development Methods for Databases, Enterprise Modeling, and Workflow Management* Wita Wojtkowski, W. Gregory Wojtkowski, Stanislaw Wrycza, Jozse Zupancic, 2012-12-06 This book is a result of the ISD 99 Eight International Conference on Information Systems Development Methods and Tools Theory and Practice held August 11-13 1999 in Boise Idaho USA The purpose of this conference was to address the issues facing academia and industry when specifying developing managing and improving information systems ISD 99 consisted not only of the technical program represented in these Proceedings but also of plenary sessions on product support and content management systems for the Internet environment workshop on a new paradigm for successful acquisition of information systems and a panel discussion on current pedagogical issues in systems

analysis and design The selection of papers for ISD 99 was carried out by the International Program Committee Papers presented during the conference and printed in this volume have been selected from submissions after formal double blind reviewing process and have been revised by their authors based on the recommendations of reviewers Papers were judged according to their originality relevance and presentation quality All papers were judged purely on their own merits independently of other submissions We would like to thank the authors of papers accepted for ISD 99 who all made gallant efforts to provide us with electronic copies of their manuscripts conforming to common guidelines We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions We thank Daryl Jones provost of Boise State University and William Lathen dean College of Business and Economics for their support and encouragement

Meta-Modeling Jean-Michel Bergé, Oz Levina, Jacques Rouillard, 2012-12-06 Models in system design follow the general tendency in electronics in terms of size complexity and difficulty of maintenance While a model should be a manageable representation of a system this increasing complexity sometimes forces current CAD tool designers and model writers to apply modeling techniques to the model itself Model writers are interested in instrumenting their model so as to extract critical information before the model is complete CAD tools designers use internal representations of the design at various stages The complexity has also led CAD tool developers to develop formal tools theories and methods to improve relevance completeness and consistency of those internal representations Information modeling involves the representation of objects their properties and relationships Performance Modeling When it comes to design choices and trade offs performance is generally the final key However performance estimations have to be extracted at a very early stage in the system design Performance modeling concerns the set of tools and techniques that allow or help the designer to capture metrics relating to future architectures Performance modeling encompasses the whole system including software modeling It has a strong impact on all levels of design choices from hardware software partitioning to the final layout Information Modeling Specification and formalism have in the past traditionally played little part in the design and development of EDA systems their support environments languages and processes Instead EDA system developers and EDA system users have seemed to be content to operate within environments that are often extremely complex and may be poorly tested and understood This situation has now begun to change with the increasing use of techniques drawn from the domains of formal specification and database design This section of this volume addresses aspects of the techniques being used In particular it considers a specific formalism called information modeling which has gained increasing acceptance recently and is now a key part of many of the proposals in the EDA Standards Roadmap which promises to be of significance to the EDA industry In addition the section looks at an example of a design system from the point of view of its underlying understanding of the design process rather than through a consideration of particular CAD algorithms Meta Modeling Performance and Information Modeling contains papers describing the very latest techniques used in meta modeling It will be a valuable text

for researchers practitioners and students involved in Electronic Design Automation **Recent Advances in Intelligent Systems and Smart Applications** Mostafa Al-Emran,Khaled Shaalan,Aboul Ella Hassanien,2020-06-26 This book explores the latest research trends in intelligent systems and smart applications It presents high quality empirical and review studies focusing on various topics including information systems and software engineering knowledge management technology in education emerging technologies and social networks It provides insights into the theoretical and practical aspects of intelligent systems and smart applications *Cyber Physical Systems. Design, Modeling, and Evaluation* Christian Berger,Mohammad Reza Mousavi,Rafael Wisniewski,2017-01-11 This book constitutes the proceedings of the 6th International Workshop on Design Modeling and Evaluation of Cyber Physical Systems CyPhy2016 held in conjunction with ESWeek 2016 in Pittsburgh PA USA in October 2016 The 9 papers presented in this volume were carefully reviewed and selected from 14 submissions They broadly interpret from a diverse set of disciplines the modeling simulation and evaluation of cyber physical systems with a particular focus on techniques and components to enable and support virtual prototyping and testing **A Metamodel for Heritage-based Urban Development** Matthias Ripp,2022-09-15 This book proposes a Metamodel for heritage based urban development based on urban morphology governance theory and the metamodeling concept of John P Van Gigch Building on international policies such as the 2011 Recommendation for Historic Urban Landscapes and the results of the 2016 Urban Habitat III Conference cultural heritage is now regarded as a potential resource for sustainable urban development While more and more evidence of the potential benefits of cultural heritage for sustainable development has been published this book is the first to develop and design a Metamodel that can be universally applied in a wide variety of settings The Metamodel was developed using grounded theory and design research methodology and is based on three successful case models from European contexts The book includes three application scenarios that elaborate how the metamodel can be used to design evaluate and improve processes where cultural heritage is a starting point for sustainable urban development Systems Science and Cybernetics - Volume II Francisco Parra-Luna,2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first

an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Metamodeling-driven IP Reuse for SoC Integration and Microprocessor Design
 Deepak A. Mathaikutty, Sandeep Shukla, 2009 This cutting edge resource offers you an in depth understanding of metamodeling approaches for the reuse of intellectual properties IPs in the form of reusable design or verification components The book covers the essential issues associated with fast and effective integration of reusable design components into a system on a chip SoC to achieve faster design turn around time Moreover it addresses key factors related

to the use of reusable verification IPs for a write once use many times verification strategy another effective approach that can attain a faster product design cycle
