John Lansdown, Rae Earnshaw

The Computer In The Visual Arts:

The Computer in the Visual Arts Anne Morgan Spalter, 1999 For anyone interested in how computers are used in art and design this introduction to computer graphics is uniquely focused on the computer as a medium for artistic expression and graphic communication *Computers in Art, Design and Animation* John Lansdown, Rae Earnshaw, 2012-12-06 The collection of papers that makes up this book arises largely from the joint activities of two specialist groups of the British Computer Society namely the Displays Group and the Computer Arts Society Both these groups are now more than 20 years old and during the whole of this time have held regular separate meetings In recent years however the two groups have held a joint annual meeting at which presentations of mutual interest have been given and it is mainly from the last two of these that the present papers have been drawn They fall naturally into four classes visualisation art design and animation although as in all such cases the boundaries between the classes are fuzzy and overlap inevitably occurs Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know **Computers and the Visual Arts** Sierra Nevada Museum of Art, Marcia Cohn Growdon, 1979

Cybernethisms Esteban García Bravo, 2015-04-15 Working extensively as both artist and scientist Aldo Giorgini 1934-1994 was one of the first computer artists to combine software writing with early printing technologies His innovative process involved producing pen plotted drawings that were embellished by painting drawing photography and screen printing This biography is the first to uncover the remarkable work and life of an underappreciated artist providing insights into the innovative methods and computerized techniques he used to weave creations that seamlessly combined technological sophistication with artistic sensibility Buried manuscripts documentation and art taken directly from Giorgini's former studio in Indiana have been used to tell the story of this digital pioneer The book explores the artist's life as a professor of civil engineering at Purdue University as well as providing a catalog of his artistic contributions Placing his work in the context of the wider development of computer art the book also presents a valuable contribution to the history of the field Giorgini's papers have been recently transferred to Purdue University's Virginia Kelly Karnes Archives and Special Collections Research Center where they will be preserved and made accessible for future researchers of digital media art history While complete in itself this book also plays an important role in contextualizing and providing an access point for that collection

Information Arts Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use and even influence science and technology A new breed of contemporary artist engages science and technology not just to adopt the vocabulary

and gizmos but to explore and comment on the content agendas and possibilities Indeed proposes Stephen Wilson the role of the artist is not only to interpret and to spread scientific knowledge but to be an active partner in determining the direction of research Years ago C P Snow wrote about the two cultures of science and the humanities these developments may finally help to change the outlook of those who view science and technology as separate from the general culture In this rich compendium Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics the physical sciences biology kinetics telecommunications and experimental digital systems such as artificial intelligence and ubiquitous computing In addition to visual documentation and statements by the artists Wilson examines relevant art theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future He also provides lists of resources including organizations publications conferences museums research centers and Web sites

Electronic Art Roger F. Malina, W. Van der Plas, T. Hokken, J. den Biggelaar, 2013-10-22 Computers are more and more becoming creative tools in music as well as in the visual arts and design In the last few years it has become clear that digital technology provides a platform for multimedia productions as well as a medium for new art forms Computer Music and Computer Graphics Animation have their own international forums The need was felt however to bring together the diverse disciplines within art and technology in one international event the First International Symposium on Electronic Art FISEA The Symposium attracted considerable interest and hundreds of papers and proposals were submitted of which a selection were accepted This book also published as a supplement to the journal Leonardo publishes 20 of these selected papers under the editorship of Wim van der Plas Ton Hokken and Johan den Biggelaar This richly illustrated issue on Electronic Art reflects the enormous international interest which FISEA generated and will further stimulate interest in applications of new technology in music visual arts and design

Art, Design and Technology: Collaboration and Implementation Rae Earnshaw, 2017-05-30 This book examines how digital technology is being used to assist the artists and designers The computer is able to store data and reproduce designs thus facilitating the speed up of the iterative process towards a final design which meets the objectives of the designer and the requirements of the user Collaborative design enables the sharing of information across digital networks to produce designed objects in virtual spaces Augmented and virtual reality techniques can be used to preview designs before they are finalized and implemented Art and design have shaped the values social structures communications and the culture of communities and civilisations The direct involvement of artists and designers with their creative works has left a legacy enabling subsequent generations to understand more about their skills their motivations and their relationship to the wider world and to see it from a variety of perspectives This in turn causes the viewers of their works to reflect upon their meaning for today and the lasting value and implications of what has been created Art installations are harnessing modern technology to process information and to display it Such environments have also proved useful in engaging users and visitors with real time images and interactive art
