 - Install and test the security/remote start system first using the associated guides and wiring diagrams. If using an existing system, verify it is fully functional before installing the Directed SmartStart module.
 - For 3000-series or standalone SmartStart systems with no remote control, test the installed system via the SmartStart activation panel.
 - Mount the SmartStart module as high as possible in the vehicle (the engraved side faces up for GPS devices). Mount with minimal

obstructions that can affect communications and within reach of the main Directed system using the provided cables (do not extend).

The module's signal strength (RSSI) can be viewed in the activation panel after a successful transmission test.

- 50 to -90 dB = good signal strength
- 91 to -100 dB = borderline/inconsistent signal strength
- > -100 dB = weak, insufficient signal strength

- **DO NOT** connect the SmartStart module until the final programming of the Remote Start main unit and verification of security/remote start system operations are completed.
