Spatial Databases Yannis Manolopoulos, Apostolos N. Papadopoulos, Michael Gr Vassilakopoulos, 2005-01-01 Spatial Databases Technologies Techniques and Trends introduces the reader to the world of spatial databases and related subtopics The broad range of topics covered within the chapters includes spatial data modeling indexing of spatial and spatiotemporal objects data mining and knowledge discovery in spatial and spatiotemporal management issues and query processing for moving objects The reader will be able to get in touch with several important research issues the research community is dealing with today Covering fundamental aspects up to advanced material Spatial Databases Technologies Techniques and Trends appeals to a broad computer science audience Although perfect for specialists each chapter is self contained making it easy for non specialists to grasp the main issues involved Emerging Trends, Techniques, and Applications in Geospatial Data Science Gaur, Loveleen, Garg, P.K., 2023-04-24 With the emergence of smart technology and automated systems in today's world big data is being incorporated into many applications Trends in data can be detected and objects can be tracked based on the real time data that is utilized in everyday life These connected sensor devices and objects will provide a large amount of data that is to be analyzed quickly as it can accelerate the transformation of smart technology The accuracy of prediction of artificial intelligence AI systems is drastically increasing by using machine learning and other probability and statistical approaches Big data and geospatial data help to solve complex issues and play a vital role in future applications Emerging Trends Techniques and Applications in Geospatial Data Science provides an overview of the basic concepts of data science related tools and technologies and algorithms for managing the relevant challenges in real time application domains The book covers a detailed description for readers with practical ideas using AI the internet of things IoT and machine learning to deal with the analysis modeling and predictions from big data Covering topics such as field spectra high resolution sensing imagery and spatiotemporal data engineering this premier reference source is an excellent resource for data scientists computer and IT professionals managers mathematicians and statisticians health professionals technology developers students and educators of higher education librarians researchers and academicians Spatial Databases Yannis Manolopoulos, Apostolos N. Papadopoulos, Michael Gr Vassilakopoulos, 2005-01-01 Introduces the reader to the world of spatial databases and related subtopics The broad range of topics includes spatial data modelling indexing of spatial and spatiotemporal objects data mining and knowledge discovery in spatial and spatiotemporal management issues and query processing for moving objects **Handbook of Research on Geoinformatics** Karimi, Hassan A., 2009-01-31 This book discusses the complete range of contemporary research topics such as computer modeling geometry geoprocessing and geographic information systems Provided by publisher **Geo-Environmental Applications of Geoinformatics** Mr. Rohit Manglik, 2024-06-24 Examines geoinformatics for environmental management using GIS and remote sensing for climate change conservation and resource analysis *Data Warehousing and Mining: Concepts, Methodologies, Tools, and*

Applications Wang, John, 2008-05-31 In recent years the science of managing and analyzing large datasets has emerged as a critical area of research In the race to answer vital questions and make knowledgeable decisions impressive amounts of data are now being generated at a rapid pace increasing the opportunities and challenges associated with the ability to effectively analyze this data Handbook of Research on Innovations in Database Technologies and Applications: Current and Future Trends Ferragine, Viviana E., Doorn, Jorge Horacio, Rivero, Laura C., 2009-02-28 This book provides a wide compendium of references to topics in the field of the databases systems and applications Provided by publisher *Encyclopedia of Geographic Information Science* Karen Kemp, 2008 Geographic information science GIScience is an emerging field that combines aspects of many different disciplines Spatial literacy is rapidly becoming recognized as a new essential pier of basic education alongside grammatical logical and mathematical literacy By incorporating location as an essential but often overlooked characteristic of what we seek to understand in the natural and built environment geographic information science GIScience and systems GISystems provide the conceptual foundation and tools to explore this new frontier The Encyclopedia of Geographic Information Science covers the essence of this exciting new and expanding field in an easily understood but richly detailed style In addition to contributions from some of the best recognized scholars in GIScience this volume contains contributions from experts in GIS supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience what changes when consideration of location is added what complexities in analytical procedures are added when we consider objects in 2 3 or even 4 dimensions what can we gain by visualizing our analytical results on a map or 3D display Key Features Brings together GIScience literature that is spread widely across the academic spectrum Offers details about the key foundations of GIScience no matter what their disciplinary origins Elucidates vocabulary that is an amalgam of all of these fields Key Themes Conceptual Foundations Cartography and Visualization Design Aspects Data Manipulation Data Modeling Geocomputation Geospatial Data Societal Issues Spatial Analysis Organizational and Institutional Aspects The Encyclopedia of Geographic Information Science is an important resource for academic and corporate libraries **Understanding Dynamics of Geographic Domains** Kathleen S. Hornsby, May Yuan, 2008-04-09 Although the dynamic aspect of the world is widely recognized information systems have lagged in their ability to represent these dynamics and provide support for users and analysts especially those who work with dynamic geographic domains A collection of peer reviewed articles Understanding Dynamics of Geographic Domains showcases new research *Conceptual Modeling for Traditional and Spatio-Temporal Applications* Christine Parent, Stefano Spaccapietra, Esteban Zimányi, 2006-09-02 From environmental management to land planning and geo marketing the number of application domains that may greatly benefit from using data enriched with spatio temporal features is expanding very rapidly Unfortunately development of new spatio temporal applications is hampered by the lack of conceptual design methods suited to cope with the additional complexity of spatio temporal data This complexity is obviously due to the particular semantics of

space and time but also to the need for multiple representations of the same reality to address the diversity of requirements from highly heterogeneous user communities Conceptual design methods are also needed to facilitate the exchange and reuse of existing data sets a must in geographical data management due to the high collection costs of the data Yet current practice in areas like geographical information systems or moving objects databases does not include conceptual design methods very well if at all This book shows that a conceptual design approach for spatio temporal databases is both feasible and easy to apprehend While providing a firm basis through extensive discussion of traditional data modeling concepts the major focus of the book is on modeling spatial and temporal information Parent Spaccapietra and Zim nyi provide a detailed and comprehensive description of an approach that fills the gap between application conceptual requirements and system capabilities covering both data modeling and data manipulation features The ideas presented summarize several years of research on the characteristics and description of space time and perception In addition to the authors own data modeling approach MADS Modeling of Application Data with Spatio temporal features the book also surveys alternative data models and approaches from industry and academia that target support of spatio temporal modeling The reader will acquire intimate knowledge of both the traditional and innovative features that form a consistent data modeling approach Visual notations and examples are employed extensively to illustrate the use of the various constructs Therefore this book is of major importance and interest to advanced professionals researchers and graduate or post graduate students in the areas of spatio temporal databases and geographical information systems For anyone thinking of doing research in this field or who is developing a system based on spatio temporal data this text is essential reading Mike Worboys U Maine Orono ME USA The high level semantic model presented and validated in this book provides essential guidance to researchers and implementers when improving the capabilities of data systems to serve the actual needs of applications and their users in the temporal and spatial domains that are so prevalent today Gio Wiederhold Stanford U CA USA
