emerging automotive applications The book presents several human machine interface HMI applications such as gesture recognition and sensing human activity classification air writing material classification vital sensing people sensing people counting people localization and in cabin automotive occupancy and smart trunk opening The underpinnings of deep learning are explored outlining the history of neural networks and the optimization algorithms to train them Modern deep convolutional neural network DCNN popular DCNN architectures for computer vision and their features are also introduced The book presents other deep learning architectures such as long short term memory LSTM auto encoders variational auto encoders VAE and generative adversarial networks GAN The application of human activity recognition as well as the application of air writing using a network of short range radars are outlined This book demonstrates and highlights how deep learning is enabling several advanced industrial consumer and in cabin applications of short range radars which weren't otherwise possible It illustrates various advanced applications their respective challenges and how they are been addressed using different deep learning architectures and algorithms

Concepts for Short Range Millimeter-wave Miniaturized Radar Systems with Built-in Self-Test Girma, Mekdes, 2019-11-21 **Paradigm Shifts in Communication, Embedded Systems, Machine Learning, and Signal Processing** Deep Gupta, Vipin Kamble, Vishal Satpute, Ashwin Kothari, 2025-08-25

This two volume set CCIS 2490 2491 constitutes the refereed proceedings of the Third International Conference on Paradigm Shifts in Communication Embedded Systems Machine Learning and Signal Processing PCEMS 2024 held in Nagpur India during November 11 12 2024 The 73 full papers and 17 short papers presented in this volume were carefully reviewed and selected from 330 submissions The papers present recent research in the areas of communication antenna computer vision medical image analysis deep learning AI based systems and applications classification problem embedded system and IoT etc

Introduction to Dual Polarization Weather Radar V. Chandrasekar, Robert M. Beauchamp, Renzo Bechini, 2023-08-17 An interdisciplinary easy to understand introduction covering fundamental theory and practical applications Featuring numerous operational examples and interpretation of radar observations this is a perfect resource for scientists and engineers working on or with radars as well as senior undergraduate and graduate students **Radar Technology** Guy

Kouemou, 2010-01-01 In this book Radar Technology the chapters are divided into four main topic areas Topic area 1 Radar Systems consists of chapters which treat whole radar systems environment and target functional chain Topic area 2 Radar Applications shows various applications of radar systems including meteorological radars ground penetrating radars and glaciology Topic area 3 Radar Functional Chain and Signal Processing describes several aspects of the radar signal processing From parameter extraction target detection over tracking and classification technologies Topic area 4 Radar Subsystems and Components consists of design technology of radar subsystem components like antenna design or waveform design **Ship Sensors** R. Glenn Wright, 2024-02-29 When combined with artificial intelligence advanced computing architectures and enhanced communications sensor technologies can monitor vessel performance and the adjacent

environment to detect conditions that may hinder voyage completion This book provides insight into the present and future of sensor architectures and configurations that can enhance vessel performance and further improve the safety of navigation It covers topics such as traditional and expanded sensor functions in engineering and navigation as well as new sensor capabilities that can provide greater insight into vessel behavior and performance and enhance awareness of passenger crew and other human activities Chapters offer background information on typical legacy vessel sensor configurations and current International Maritime Organization IMO requirements for onboard sensors and future regulatory trends before discussing modern sensors and current generation smart sensors that provide enhanced situational awareness to watchstanders A vision of next generation sensors currently being investigated for shipboard use is provided along with long term trends in quantum sensing and computing that promise radical change across a wide variety of vessel functions Insight is also given into cybersecurity factors so essential to all sensor systems Ship Sensors Conventional Unmanned and Autonomous is ideal for professional seafarers maritime academics and university students and developers of maritime sensors and systems

Radar and Sonar Imaging and Processing Andrzej Stateczny,Krzysztof Kulpa,Witold Kazimierski,2021-01-22 The Special Issue Radar and Sonar Imaging Processing is a collection of 21 articles exploring many topics related to remote sensing with radar and sonar sensors In this editorial we present short introductions of the published articles The series of articles in this SI deal with a broad profile of aspects of the use of radar and sonar images in line with the latest scientific trends while making use of the latest developments in science including artificial intelligence It can be said that both radar and sonar imaging and processing still remain a hot topic and much research in this area is being conducted worldwide New techniques and methods for extracting information from radar and sonar sensors and data have been proposed and verified Some of these will stimulate further research while others have reached maturity and can be considered for industrial implementation and development
