The Challenge Of Rural Electrification The Challenge Of Rural Electrification:

The Challenge of Rural Electrification Douglas F. Barnes, 2010-09-30 Douglas Barnes and his team of development experts provide an essential guide that can help improve the quality of life to the estimated 1.6 billion rural people in the world who are without electricity. The difficulties in bringing electricity to rural areas are formidable. Low population densities result in high capital and operating costs. Consumers are often poor and their electricity consumption is low. Politicians interfere with the planning and operations of programs insisting on favored constituents. Yet as Barnes and his contributors demonstrate, many countries have overcome these obstacles. *The Challenge of Rural Electrification* provides lessons from successful programs in Bangladesh, Chile, China, Costa Rica, Mexico, the Philippines, Thailand, and Tunisia, as well as Ireland and the United States. These insights are presented in a format that should be accessible to a broad range of policymakers, development professionals, and community advocates. Barnes and his contributors do not provide a single formula for bringing electricity to rural areas. They do not recommend a specific set of institutional arrangements for the participation of public sector companies, cooperatives, and private firms. They argue instead that successful programs follow a flexible but still well-defined set of principles: a financially viable plan that clearly accounts for any subsidies; a cooperative relationship between electricity providers and local communities; and an operational separation from day-to-day government and politics.

The Gender-Energy Nexus in Eastern and Southern Africa Mihyo, Paschal B., Mukuna, Truphena E., 2016-07-25 The Regional Economic Communities (RECs) in Eastern and Southern Africa have been at the forefront to developing new energy policies and programmes aimed at reaching the UN goal of Ensuring Access to Clean Energy for All by 2030. In the year 2006, the East African Community passed the EAC Strategy to Scale Up Access to Modern Energy Services, committing its Member States to reach the UN goal of access to all by 2030. The Inter-governmental Authority for Development adopted its Environmental and Natural Resources Policy in 2007, which includes issues of renewable energy. The Common Market for Eastern and Southern Africa launched its Model Energy Programme in 2012, followed the same year by its comprehensive baselines database on renewable resources covering all its Member States. In the year 2009, the African Union General

Assembly at its 12th Ordinary Session adopted the Policy on Scaling Up Renewable Energy in Africa. The regional policies have been domesticated by Member States of the RECs. Although their targets are very ambitious, implementation programmes launched at national level are robust and producing results. Both in the policies and implementation programmes, gender issues have however not featured prominently. Noting this deficit, the Organisation for Social Science Research in Eastern and Southern Africa called for researchers to assess the extent to which energy policies in Eastern and Southern Africa have taken gender issues on board. This book is the product of that project. It has ten chapters that investigated the gender energy nexus in Zimbabwe, Ethiopia, Tanzania, Swaziland, Sudan, and Kenya. The book will prove useful to all policy makers, researchers, and analysts who may be interested in strengthening the gender content of the programmes as we move towards 2030. We believe it triggers and helps policy makers and researchers to create platforms to use its findings and those of others to see how, in gender terms, those at the bottom of the energy access pyramid can be factored into these programmes to make sure they are not left behind.

Meeting Challenges, Measuring Progress Douglas F. Barnes, Hussain Samad, Salvador Rivas, 2018-11-14. Energy access is an essential prerequisite for economic, social, and human development. The 2015 United Nations Sustainable Development Goals (SDGs) explicitly recognized affordable and clean energy as a key factor in development alongside education and poverty alleviation. The UN Sustainable Energy for All initiative (SEforALL) mobilizes international donors, countries, and the private sector to help people in developing countries gain access to modern energy services. To assist in support of SEforALL goals, this joint study of the Inter American Development Bank (IDB) and the United Nations Development Programme (UNDP) provides a comprehensive review of energy poverty policies and programs in Latin America and the Caribbean (LAC). This report measures the progress and impact of energy access programs and also documents the experience of successful projects. This study reviews cutting-edge methodologies to assist in program design, shares experiences of successful programs, and develops a vision for reaching sustainable energy for all in the LAC region. With electricity coverage at more than 96 percent, LAC is close to becoming the world's first developing region to achieve universal access to electricity. Despite recent progress within LAC, there are still substantial pockets of energy poverty. Approximately 21.8 million people are without electricity access. More than 80 million people rely on firewood and charcoal for cooking, that is, burned in fuel-inefficient, primitive stoves. These traditional cooking technologies emit a significant amount of indoor air pollution (IAP), which has been linked to respiratory illnesses and adverse environmental impacts. Thus, in addition to promoting electricity energy access programs, also might give priority to the promotion of cleaner methods of cooking by making available better stoves and cleaner burning fuels at reasonable costs. The report also explores ways to measure energy poverty and monitor energy access in developing countries. The accuracy and effectiveness of tools such as the IEA's household energy data efforts and the Global Tracking Framework depend on collecting information through standardized national surveys. Approaches to measure energy poverty and monitor energy

access have increasingly focused on the provision of energy services such as lighting space conditioning and cooking The transition from low quality energy services to more modern forms can be accomplished in different ways As households in developing countries adopt electricity and clean methods of cooking they benefit from higher quality lower cost and convenient to use appliances However measuring the societal and developmental benefits of energy investments though difficult is important Two basic approaches have evolved over the years to measure the benefits of energy access i consumer surplus and ii regression based techniques The consumer surplus approach evaluates the economic benefits of energy services through measuring increased demand resulting from lower costs of such energy end uses such as lighting radio and television When possible rigorous impact evaluation techniques based on multivariate models can be used to more directly measure the socioeconomic benefits associated with energy access and modern energy services including higher income and improved education In recent years new approaches for meeting the requirements of modern and sustainable energy services have emerged Due to technical and market changes new types of equipment have become available for providing energy services to rural areas In LAC three basic models have been developed to provide rural populations with electricity service i main grid extension ii community networks and iii individual home based systems including clean cookstoves
