Chapter 1: The game of chess

1.1 No. The statement in the exercise holds for games without chance moves, but also for games with chance moves, like backgammon. The statement in Theorem 1.4, on the other hand, does not hold in backgammon; in this game, if a player is extremely lucky, he can win regardless of the strategy of the other player. In particular, the two statements cannot be equivalent.

1.2 Tic-Tac-Toe, Four in a row, Nim.

1.3 (a) Denote by N the number of game positions in chess. If after N^2 turns neither White wins nor Black wins, then there is at least one game position that is repeated twice so the play ends with draw. Hence, the conditions of Theorem 1.5 are satisfied and (a) holds.

(b) Assume that one of the players has a winning strategy in finite chess. Then he can guarantee by following this strategy that finite chess ends with his winning- before it reaches a repeated game position. Therefore, a strategy in which he follows his winning strategy as long as no game position is repeated, otherwise he chooses an arbitrary legal action is a winning strategy in chess. Indeed, by following this strategy in chess the game ends before it reaches a repeated game position as if it is finite chess, thus it leads to his winning.

(c) Assume that each player has a strategy guaranteeing at least a draw in finite chess. We show that each player has a strategy guaranteeing at least a draw in chess. We show it for White, the proof for Black is similar and thus it is omitted.

Denote by σ_W a strategy of White in finite chess that guarantees at least a draw. Consider the following strategy $\hat{\sigma}_W$ for White in chess: implement the strategy σ_W until either the play of chess terminates or a game position repeats itself (at which point, the play of finite chess terminates). If the play of chess arrives to a game position x that has previously appeared, implement the strategy σ_W restricted to the subgame beginning at x until the play arrives at a game position y that has previously appeared, and so on.

We prove that the strategy $\hat{\sigma}_W$ guarantees at least a draw in chess. Assume by contradiction that $\hat{\sigma}_W$ does not guarantee at least a
