Solved and Unsolved Problems of Structural Chemistry Milan Randic, Marjana Novic, Dejan Plavsic, 2016-04-21 Solved and Unsolved Problems of Structural Chemistry introduces new methods and approaches for solving problems related to molecular structure. It includes numerous subjects such as aromaticity, one of the central themes of chemistry, and topics from bioinformatics such as graphical and numerical characterization of DNA proteins and proteomes. It also includes Unsolved Problems in Number Theory by Richard Guy, 2013-11-11. To many laymen, mathematicians appear to be problem solvers: people who do hard sums. Even inside the profession, we classify ourselves as either theorists or problem solvers. Mathematics is kept alive much more than by the activities of either class by the appearance of a succession of unsolved problems both from within mathematics itself and from the increasing number of disciplines where it is applied. Mathematics often owes more to those who ask questions than to those who answer them. The solution of a problem may stifle interest in the area around it. But Fermat's Last Theorem, because it is not yet a theorem, has generated a great deal of good mathematics. Whether goodness is judged by beauty, by depth, or by applicability, to pose good unsolved problems is a difficult art. The balance between triviality and hopeless unsolvability is delicate. There are many simply stated problems which experts tell us are unlikely to be solved in the next generation. But we have seen the Four Color Conjecture settled even if we don't live long enough to learn the status of the Riemann and Goldbach hypotheses, of twin primes or Mersenne primes or of odd perfect numbers. On the other hand, unsolved problems may not be unsolved at all or than was at first thought.

Design Meets Disability Graham Pullin, 2011-09-30. How design for disabled people and mainstream design could inspire, provoke, and radically change each other. Eyeglasses have been transformed from medical necessity to fashion accessory. This revolution has come about through embracing the design culture of the fashion industry. Why shouldn't design sensibilities also be applied to hearing aids, prosthetic limbs, and communication aids? In return, disability can provoke radical new directions in mainstream design. Charles and Ray Eames's iconic furniture was inspired by a molded plywood leg splint that they designed for injured and disabled servicemen. Designers today could be similarly inspired by disability. In *Design Meets Disability*, Graham Pullin shows us how design and disability can inspire each other. In the Eameses' work, there was a healthy tension between cut-throat problem solving and more playful explorations. Pullin offers examples of how design can meet disability today. Why he asks shouldn't hearing aids be as fashionable as eyewear? What new forms of Braille signage might proliferate if designers kept both sighted and visually impaired people in mind? Can simple designs avoid the need for complicated accessibility features? Can such emerging design methods as experience prototyping and critical design complement clinical trials? Pullin also presents a series of interviews with leading designers about specific disability design projects, including stepstools for people with restricted growth, prosthetic legs, and whether they can be both honest and beautifully designed, and text-to-speech technology with tone of voice. When design meets disability, the diversity of complementary even contradictory

approaches can enrich each field *International Perspectives on Gender and Mathematics Education* Olof Steinhorsdottir, Helen J. Forgasz, Joanne Rossi Becker, Kyeonghwa Lee, 2010-06-01 Why a book on gender issues in mathematics in the 21st century Several factors have influenced the undertaking of this project by the editors First an international volume focusing on gender and mathematics has not appeared since publication of papers emerging from the 1996 International Congress on Mathematical Education Keitel 1998 Surely it was time for an updated look at this critical area of mathematics education Second we have had lively discussion and working groups on gender issues at conferences of the International Group for the Psychology of Mathematics Education PME for the past four years sessions at which stimulating and ground breaking research has been discussed by participants from many different countries Some publication seemed essential to share this new knowledge emerging from a wider variety of countries and from different cultural perspectives Third some western countries such as Australia and the USA have experienced in recent years a focus on the boy problem with an underlying assumption that issues of females and mathematics have been solved and are no longer worthy of interest Thus it seemed timely to look more closely at the issue of gender and mathematics internationally When the idea for this volume first emerged invitations were issued to those regularly attending the working and discussion groups at PME Potential authors were charged to focus on gender issues in mathematics and were given wide scope to hone in on the issues that were central to their own research efforts or were in receipt or in need of close attention in their own national or regional contexts *Integrative Problem-Solving in a Time of Decadence* George Christakos, 2010-12-10 Presents a unique study of Integrative Problem Solving IPS The consideration of Decadence is essential in the scientific study of environmental and other problems and their rigorous solution because the broad context within which the problems emerge can affect their solution Stochastic reasoning underlines the conceptual and methodological framework of IPS and its formulation has a mathematical life of its own that accounts for the multidisciplinary of real world problems the multisourced uncertainties characterizing their solution and the different thinking modes of the people involved Only by interpolating between the full range of disciplines including stochastic mathematics physical science neuropsychology philosophy and sociology and the associated thinking modes can scientists arrive at a satisfactory account of problem solving and be able to distinguish between a technically complete problem solution and a solution that has social impact **New Philosophical Perspectives on Scientific Progress** Yafeng Shan, 2022-11-01 This collection of original essays offers a comprehensive examination of scientific progress which has been a central topic in recent debates in philosophy of science Traditionally debates over scientific progress have focused on different methodological approaches notably the epistemic and semantic approaches The chapters in Part I of the book examine these two traditional approaches as well as the newly revived functional and newly developed noetic approaches Part II features in depth case studies of scientific progress from the history of science The chapters cover individual sciences including physics chemistry evolutionary biology seismology

psychology sociology economics and medicine Finally Part III of the book explores important issues from contemporary philosophy of science These chapters address the implications of scientific progress for the scientific realism anti realism debate incommensurability values in science idealisation scientific speculation interdisciplinarity and scientific perspectivalism New Philosophical Perspectives on Scientific Progress will be of interest to researchers and advanced students working on the history and philosophy of science **The Inquisitive Problem Solver** Paul Vaderlind,Richard K. integrating Marker Passing and Problem Solving James A. Hendler,2014-05-12 A recent area of interest in the Artificial Intelligence community has been the application of massively parallel algorithms to enhance the choice mechanism in traditional AI problems This volume provides a detailed description of how marker passing a parallel non deductive spreading activation algorithm is a powerful approach to refining the choice mechanisms in an AI problem solving system The author scrutinizes the design of both the algorithm and the system and then reviews the current literature and research in planning and marker passing Also included a comparison of this computer model with some standard cognitive models and a comparison of this model to the connectionist approach **The Mind as a Scientific Object** Christina E. Erneling,David Martel Johnson,2005 This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions BOOK JACKET
