Tutorials on Emerging Methodologies and Applications in Operations Research Harvey J. Greenberg, 2006-06-16

This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future problem solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addressing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this

respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA. The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation.
