The Handbook of Groundwater Engineering Jacques W. Delleur, 2010-12-12 Due to the increasing demand for adequate water supply caused by the augmenting global population groundwater production has acquired a new importance In many areas surface waters are not available in sufficient quantity or quality Thus an increasing demand for groundwater has resulted However the residence of time of groundwater can be of the order of thousands of years while surface waters is of the order of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the construction of wells and well fields the production of groundwater and site characterization and remediation of groundwater pollution No other reference specializes in groundwater engineering to such a broad range of subjects Its use extends to The engineer designing a well or well field The engineer designing or operating a landfill facility for municipal or hazardous wastes The hydrogeologist investigating a contaminant plume The engineer examining the remediation of a groundwater pollution problem The engineer or lawyer studying the laws and regulations related to groundwater quality The scientist analyzing the mechanics of solute transport The geohydrologist assessing the regional modeling of aquifers The geophysicist determining the characterization of an aquifer The cartographer mapping aquifer characteristics The practitioner planning a monitoring network

The Application of Heat and Chemicals in the Control of Biofouling Events in Wells George Alford, D. Roy Cullimore, 1998-12-29 Application of heat and chemicals to a biofouling well is a relatively new approach for water well rehabilitation For the first time The Application of Heat and Chemicals in the Control of Biofouling Events in Wells explains what many microbiologists now believe is the most effective form of treatment pasteurization and application of chemicals

Consider an increasingly prevalent alternative to traditional forms of encrustation an approach which recognizes that water wells are conduits to the sub surface realm whose organisms impact the production characteristics of wells Features
