Specification And Design Methodology For Real Time Embedded Systems:

Specification and Design Methodology for Real-Time Embedded Systems Randall S. Janka, 2012-12-06 Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors

Embedded System Design: Topics, Techniques and Trends Achim

Rettberg, Mauro Zanella, Rainer Dömer, Andreas Gerstlauer, Franz Rammig, 2010-05-09 Over recent years embedded systems have gained an enormous amount of processing power and functionality Many of the formerly external components can now be integrated into a single System on Chip This tendency has resulted in a dramatic reduction in the size and cost of embedded systems As a unique technology the design of embedded systems is an essential element of many innovations Embedded System Design Topics Techniques and Trends presents the technical program of the International Embedded Systems Symposium IESS 2007 held in Irvine California IESS is a unique forum to present novel ideas exchange timely research results and discuss the state of the art and future trends in the field of embedded systems Contributors and participants from both industry and academia take active part in this symposium The IESS conference is organized by the Computer Systems Technology committee TC10 of the International Federation for Information Processing IFIP Timely topics techniques and trends in embedded system design are covered by the chapters in this book including design methodology specification and modeling embedded software and hardware synthesis networks on chip distributed and networked systems and system verification and validation Particular emphasis is paid to automotive and medical applications A set of actual case studies and special aspects in embedded system design are included as well

High-Level System Modeling Ronald

Waxman, Jean-Michel Bergé, Oz Levia, Jacques Rouillard, 2012-12-06 In system design generation of high level abstract models that can be closely associated with evolving lower level models provides designers with the ability to incrementally test an evolving design against a model of a specification Such high level models may deal with areas such as performance reliability availability maintainability and system safety Abstract models also allow exploration of the hardware versus software design space in an incremental fashion as a fuller detailed design unfolds leaving behind the old practice of hardware software binding too early in the design process Such models may also allow the inclusion of non functional aspects of design e.g. space power heat in a simulatable information model dealing with the system's operation This book addresses Model Generation and Application specifically in the following domains Specification modeling linking object data modeling behavior modeling and activity modeling Operational specification modeling modeling the way the system is supposed to operate from a user's viewpoint Linking non functional parameters with specification models Hybrid modeling linking performance and functional elements Application of high level modeling to hardware software approaches Mathematical analysis techniques related to the modeling approaches Reliability modeling Applications of High Level Modeling Reducing

High Level Modeling to Practice High Level System Modeling Specification and Design Methodologies describes the latest research and practice in the modeling of electronic systems and as such is an important update for all researchers design engineers and technical managers working in design automation and circuit design Reliable Software Technologies - Ada-Europe '99 Michael Gonzalez Harbour, Juan A. de la Puente, 2003-07-31 The Fourth International Conference on Reliable Software Technologies Ada Europe 99 took place in Santander Spain from June 7 to 11 1999 It was sponsored by Ada Europe the European federation of national Ada societies in cooperation with ACM SIGAda and Ada Spain and it was organized by members of the University of Cantabria and the Technical University of Madrid in Spain This was the 19th consecutive year of Ada Europe conferences which have always been the main Ada events in Europe with their counterparts being the ACM SIGAda conferences in the USA formerly Tri Ada The conference is not just devoted to the Ada language but rather to the more general area of reliable software technologies In this sense there are papers on formal methods testing software architectures and design software engineering tools etc We believe that the role of reliable software technologies is becoming increasingly important as computer applications control more and more of our everyday systems The goal of our conference is to contribute to advancing the state of the art of all the technologies that help us in achieving better and more reliable software at a lower overall cost
