Life Karolina Zawieska, Mohammad Obaid , Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03 Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions

to further develop the HRI domain *Robots in Care and Everyday Life* Uwe Engel, 2022-10-13 This open access book presents detailed findings about the ethical legal and social acceptance of robots in the German and European context The key resource is the Bremen AI Delphi survey of scientists and politicians and a related population survey The focus is on trust in robotic assistance human willingness to use this assistance and the expected personal well being in human robot interaction Using recent data from Eurostat the European Social Survey and the Eurobarometer survey the analysis is extended to Germany and the EU The acceptance of robots in care and everyday life is viewed against their acceptance in other contexts of life and the scientific research The book reports on how the probability of five complex future scenarios is evaluated by experts and politicians These scenarios cover a broad range of topics including the worst case scenario of cutthroat competition for jobs the wealth promise of AI communication in human robot interaction robotic assistance and ethical and legal conflicts International economic competition alone will ensure that countries invest sustainably in the future technologies of AI and robots But will these technologies also be accepted by the population The book raises the core issue of how governments can gain the needed social ethical and user acceptance of AI and robots in everyday life This highly topical book is of interest to researchers professionals and policy makers working on various aspects of human robot interaction This is an open access book **The Fabric of Tomorrow: Weaving Technology into Everyday Life** David Hooper, From
