Substitutions In Dynamics Arithmetics And Combinatorics Lecture Notes In Mathematics Vol 1794:

Combinatorics, Words and Symbolic Dynamics Valérie Berthé, Michel Rigo, 2016-02-26 Internationally recognised researchers look at developing trends in combinatorics with applications in the study of words and in symbolic dynamics. They explain the important concepts providing a clear exposition of some recent results and emphasise the emerging connections between these different fields. Topics include combinatorics on words, pattern avoidance, graph theory, tilings and theory of computation, multidimensional subshifts, discrete dynamical systems, ergodic theory, numeration systems, dynamical arithmetics, automata theory and synchronised words, analytic combinatorics, continued fractions and probabilistic models. Each topic is presented in a way that links it to the main themes but then they are also extended to repetitions in words, similarity relations, cellular automata, friezes and Dynkin diagrams. The book will appeal to graduate students, research mathematicians and computer scientists working in combinatorics, theory of computation, number theory, symbolic dynamics, tilings and stringology. It will also interest biologists using text algorithms.

Substitution and Tiling Dynamics: Introduction to Self-inducing Structures Shigeki Akiyama, Pierre Arnoux, 2020-12-05 This book presents a panorama of recent developments in the theory of tilings and related dynamical systems. It contains an expanded version of courses given in 2017 at the research school associated with the Jean Morlet chair program. Tilings have been designed, used and studied for centuries in various contexts. This field grew significantly after the discovery of aperiodic self-similar tilings in the 60s, linked to the proof of the undecidability of the Domino problem and was driven further by Dan Shechtman's discovery of quasicrystals in 1984. Tiling problems establish a bridge between the mutually influential fields of geometry, dynamical systems, aperiodic order, computer science, number theory, algebra and logic. The main properties of tiling dynamical systems are covered with expositions on recent results in self-similarity and its generalizations, fusion rules and S-adic systems, algebraic developments connected to physics, games and undecidability questions and the spectrum of substitution tilings.

Ergodic Theory and Dynamical Systems in their Interactions with Arithmetics and Combinatorics Sébastien Ferenczi, Joanna Kułaga-Przymus, Mariusz Lemańczyk, 2018-06-15 This book concentrates on the modern theory of dynamical systems and its interactions with number theory and combinatorics. The greater part begins with a course in analytic number theory and focuses on its links with ergodic theory, presenting an exhaustive account of recent research on Sarnak's conjecture on Möbius disjointness. Selected topics involving more traditional connections between number theory and dynamics are also presented, including equidistribution, homogeneous dynamics and Lagrange and Markov spectra. In addition, some dynamical and number-theoretical aspects of aperiodic order, some algebraic systems and a recent development concerning tame systems are described.

Combinatorics, Automata and Number Theory Valérie Berthé, Michel Rigo, 2010-08-12 This collaborative volume presents trends arising from the fruitful interaction between the themes of combinatorics on words, automata and formal language theory and number theory. Presenting several important tools and

concepts the authors also reveal some of the exciting and important relationships that exist between these different fields Topics include numeration systems word complexity function morphic words Rauzy tilings and substitutive dynamical systems Bratelli diagrams frequencies and ergodicity Diophantine approximation and transcendence asymptotic properties of digital functions decidability issues for DOL systems matrix products and joint spectral radius Topics are presented in a way that links them to the three main themes but also extends them to dynamical systems and ergodic theory fractals tilings and spectral properties of matrices Graduate students research mathematicians and computer scientists working in combinatorics theory of computation number theory symbolic dynamics fractals tilings and stringology will find much of interest in this book

Ergodic Theory, Dynamical Systems, and the Continuing Influence of John C. Oxtoby Joseph Auslander, Aimee Johnson, Cesar E. Silva, 2016-11-29 This volume contains the proceedings of three conferences in Ergodic Theory and Symbolic Dynamics the Oxtoby Centennial Conference held from October 30 31 2010 at Bryn Mawr College the Williams Ergodic Theory Conference held from July 27 29 2012 at Williams College and the AMS Special Session on Ergodic Theory and Symbolic Dynamics held from January 17 18 2014 in Baltimore MD This volume contains articles covering a variety of topics in measurable symbolic and complex dynamics It also includes a survey article on the life and work of John Oxtoby providing a source of information about the many ways Oxtoby's work influenced mathematical thought in this and other fields

Algebraic and Topological Dynamics S. F. Koliada, Thomas Ward, 2005 This volume contains a collection of articles from the special program on algebraic and topological dynamics and a workshop on dynamical systems held at the Max Planck Institute Bonn Germany It reflects the extraordinary vitality of dynamical systems in its interaction with a broad range of mathematical subjects Topics covered in the book include asymptotic geometric analysis transformation groups arithmetic dynamics complex dynamics symbolic dynamics statistical properties of dynamical systems and the theory of entropy and chaos The book is suitable for graduate students and researchers interested in dynamical systems

Topological and Ergodic Theory of Symbolic Dynamics Henk Bruin, 2023-01-20 Symbolic dynamics is essential in the study of dynamical systems of various types and is connected to many other fields such as stochastic processes ergodic theory representation of numbers information and coding etc This graduate text introduces symbolic dynamics from a perspective of topological dynamical systems and presents a vast variety of important examples After introducing symbolic and topological dynamics the core of the book consists of discussions of various subshifts of positive entropy of zero entropy other non shift minimal action on the Cantor set and a study of the ergodic properties of these systems The author presents recent developments such as spacing shifts square free shifts density shifts mathcal B free shifts Bratteli Vershik systems enumeration scales amorphic complexity and a modern and complete treatment of kneading theory Later he provides an overview of automata and linguistic complexity Chomsky's hierarchy The necessary background for the book varies but for most of it a solid knowledge of real analysis and linear algebra and first courses in probability and measure theory metric

spaces number theory topology and set theory suffice Most of the exercises have solutions in the back of the book

Combinatorial Algebra: Syntax and Semantics Mark V. Sapir, 2014-10-06 Combinatorial Algebra Syntax and Semantics provides comprehensive account of many areas of combinatorial algebra It contains self contained proofs of more than 20 fundamental results both classical and modern This includes Golod Shafarevich and Olshanskii's solutions of Burnside problems Shirshov's solution of Kurosh's problem for PI rings Belov's solution of Specht's problem for varieties of rings Grigorchuk's solution of Milnor's problem Bass Guivarc'h theorem about growth of nilpotent groups Kleiman's solution of Hanna Neumann's problem for varieties of groups Adian's solution of von Neumann Day's problem Trahtman's solution of the road coloring problem of Adler Goodwyn and Weiss The book emphasizes several universal tools such as trees subshifts uniformly recurrent words diagrams and automata With over 350 exercises at various levels of difficulty and with hints for the more difficult problems this book can be used as a textbook and aims to reach a wide and diversified audience No prerequisites beyond standard courses in linear and abstract algebra are required The broad appeal of this textbook extends to a variety of student levels from advanced high schoolers to undergraduates and graduate students including those in search of a Ph D thesis who will benefit from the Further reading and open problems sections at the end of Chapters 2-5 The book can also be used for self study engaging those beyond the classroom setting researchers instructors students virtually anyone who wishes to learn and better understand this important area of mathematics

Combinatorics on Words, The two parts of this text are based on two series of lectures delivered by Jean Berstel and Christophe Reutenauer in March 2007 at the Centre de Recherches Mathematiques Montreal Canada Part I represents the first modern and comprehensive exposition of the theory of Christoffel words Part II presents numerous combinatorial and algorithmic aspects of repetition free words stemming from the work of Axel Thue a pioneer in the theory of combinatorics on words A beginner to the theory of combinatorics on words will be motivated by the numerous examples and the large variety of exercises which make the book unique at this level of exposition The clean and streamlined exposition and the extensive bibliography will also be appreciated After reading this book beginners should be ready to read modern research papers in this rapidly growing field and contribute their own research to its development Experienced readers will be interested in the finitary approach to Sturmian words that Christoffel words offer as well as the novel geometric and algebraic approach chosen for their exposition They will also appreciate the historical presentation of the Thue Morse word and its applications and the novel results on Abelian repetition free words
