1. Carrying Capacity

- **Definition:** The largest number of individuals of a species that an environment can support based on available resources.
 - **Example:** A forest can only support a certain number of deer due to limited food and space. If the population grows beyond what can be supported, some will starve or migrate.
-

2. Population Growth and Limiting Factors

- **Exponential Growth:** Is a rapid, unrestrained growth of a population where there are no limits (e.g., when a species is introduced to a new area).
 - **Logistic Growth:** Is a S-shaped curve that shows population growth slowing as it nears the carrying capacity.
 - **Limiting Factors:**
 - **Density-dependent:** Factors that depend on population size, such as competition, disease, and predation.
 - **Density-independent:** Factors that affect a population regardless of size (like natural disasters).
-

3. Biotic Interactions

- **Predation:** One organism kills and eats another organism (e.g., a wolf eating a rabbit).
- **Competition:**
 - **Intraspecific:** Competition between individuals of the same species (e.g., two lions fighting for food).
 - **Interspecific:** Competition between individuals of different species (e.g., a hawk and a falcon competing for prey).
