Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1972 **A Biologist's Guide to Mathematical Modeling in Ecology and Evolution** Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available **Lectures on Linear Algebra and its Applications**

Philip Korman, 2023-10-24 The present book is based on the extensive lecture notes of the author and contains a concise course on Linear Algebra The sections begin with an intuitive presentation aimed at the beginners and then often include rather non trivial topics and exercises This makes the book suitable for introductory as well as advanced courses on Linear Algebra The first part of the book deals with the general idea of systems of linear equations matrices and eigenvectors Linear systems of differential equations are developed carefully and in great detail The last chapter gives an overview of applications to other areas of Mathematics like calculus and differential geometry A large number of exercises with selected solutions make this a valuable textbook for students of the topic as well as lecturers preparing a course on Linear Algebra
