**Project Zero Frameworks for Early Childhood Education: Project Spectrum : early learning activities** Howard Gardner, David Henry Feldman, Mara Krechevsky, Jie-Qi Chen, 1998-11-13 The groundbreaking work of Harvard University psychologist Howard Gardner on multiple intelligences and Tufts University psychologist David Henry Feldman on nonuniversal development is fast becoming the standard by which children's intelligence and cognitive development is understood In this landmark three volume set Mara Krechevsky and her colleagues at Project Zero make these insights available for both teachers and scholars alike This curriculum resource provides enriching activities in a wide variety of disciplines including mechanics and construction movement and music [Centering Humanism in STEM Education](#) Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM **Workgroups eAssessment: Planning, Implementing and Analysing Frameworks** Rosalina Babo, Nilanjan Dey, Amira S. Burge,2013-06-29 Not long ago projections of how office technologies would revolutionize the production of documents in a high tech future carried many promises The paper less office and the seamless and problem free sharing of texts and other work materials among co workers were just around the corner we were told To anyone who has been involved in putting together a volume of the present kind such forecasts will be met with considerable skepticism if not outright distrust The diskette the email the fax the net and all the other forms of communication that are now around are powerful assets but they do not in any way reduce the flow of paper or the complexity of coordinating activities involved in producing an artifact such as a book Instead the reverse seems to be true Obviously the use of such tools requires considerable skill at the center of coordination to borrow an expression from a chapter in this volume As editors we have been fortunate to have Ms Lotta Strand Linköping University at the center of the distributed activity that producing this volume has required over the last few years With her considerable skill and patience Ms Strand and her work provide a powerful illustration of the main thrust of most of the chapters in this volume Practice is a coordination of thinking and action and many things had to be kept in mind during the production of this volume     **Early Psychological Research Contributions from Women of Color, Volume 1**
