Militarizing Outer Space Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry Concentrating on weapons warfare and violence this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens The third and final volume in the groundbreaking European Astroculture trilogy Militarizing Outer Space zooms in on the interplay between security technopolitics and knowledge from the 1920s through the 1980s Often hailed as the site of heavenly utopias and otherworldly salvation outer space transformed from a promised sanctuary to a present threat where the battles of the future were to be waged Astroculture proved instrumental in fathoming forms and functions of warfare's futures past both on earth and in space The allure of dominating outer space the book shows was neither limited to the early twenty first century nor to current American space force rhetorics

The Spacefaring Earth Michael G. Smith, 2024-12-04 This engaging survey of the Space Age links science and technology with politics and popular culture war and peace and crises and controversies It examines the history of spaceflight as a mirror of human thought and action across the Earth The volume encompasses the new astronomy and sciences of the modern era the early dreamers and pioneers after 1903 the national competitions of the First World War the rocket states that prepared for the Second World War the rivalries and space race of the Cold War between the US and USSR as well as more recent developments including the Space Shuttle the International Space Station national space programs orbital technologies transhumanism and military and commercial ventures in space It also stresses the importance of geography in the geopolitics of spaceflight competition and in the nature of the planetary biosphere Taking a chronological approach to lived human experience and threshold achievements the chapters show how these themes have been reflected in literature art music film and our new digital worlds This book is essential reading for students of the history of the Space Age as well as an excellent companion to courses on twentieth century science and technology the Cold War and American history

21st Century Prometheus Maurizio Martellini, Ralf Trapp, 2020-03-11 This book describes the evolving CBRN risk landscape and highlights advances in the core CBRN technologies including when combined with improvised explosive devices CBRN threats It analyses how associated technologies create new safety and security risks challenging certain assumptions that underlie current control regimes The book also shows how technologies can be enablers for more effective strategies to mitigate these risks 21st century safety and security risks emanating from chemical biological radiological and nuclear materials whether resulting from natural events accidents or malevolent use are increasingly shaped by technologies that enable their development production or use in ways that differ from the past Artificial intelligence the use of cyberspace the revolution in the life sciences new manufacturing methods new platforms and equipment for agent delivery hypersonic

weapons systems information tools utilised in hybrid warfare these and other technologies are reshaping the global security environment and CBRN landscape They are leading to a growing potential for highly targeted violence and they can lead to greater instability and vulnerability worldwide At the same time technology offers solutions to manage CBRN risks Examples are faster detection more accurate characterisation of the nature and origin of CBRN agents new forensic investigation methods or new medical treatments for victims of CBRN incidents New educational concepts help to foster a culture of responsibility in science and technology and strengthen governance New training methods help develop practical skills to manage CBRN risks more effectively The book concludes that there is a growing need for a holistic framework towards CBRN risk mitigation Traditional arms control mechanisms such as global regional or bilateral treaties and export controls are still needed as they provide a necessary legal and institutional framework But laws and technology denial alone will not suffice and institutional mechanisms can at times be weak Given the pace of technological progress and the diffusion of critical knowledge tools and materials policymakers must accept that CBRN risks cannot be eliminated altogether Instead society has to learn to manage these risks and develop resilience against them This requires a softer broadly based multi stakeholder approach involving governments industry the research and development communities educators and civil society Furthermore educating policymakers that cutting edge technologies may seriously affect global strategic stability could create incentives for developing a more creative and contemporary arms control strategy that fosters cooperation rather than incremental polarisation

Military Doctrine Bert Chapman, 2009-09-03 This comprehensive volume provides a thorough overview of 20th and 21st century military doctrines worldwide *Military Doctrine A Reference Handbook* takes a thorough look at 20th and 21st century military doctrines around the world It excerpts relevant English language scholarly and governmental literature to paint a picture of how military doctrine has developed in recent history what military doctrines are currently operating on the world stage and where military doctrine is heading in the near future The book casts a wide net scanning the relevant government documents international agreements monographs journals conference papers and Internet resources to present a thorough overview of the importance of military

doctrine in today's highly unstable world. Because military institutions are important formulators of national military doctrine and not merely implementers, this book examines the roles played by military organizations around the world. With the proliferation of independent military scholars and the widespread influence of their work in the Internet age, the book also scans the gray literature and describes its effects on military doctrine.

Geopolitics Bert Chapman, 2011-04-07

This concise introduction to the growth and evolution of geopolitics as a discipline includes biographical information on its leading historical and contemporary practitioners and detailed analysis of its literature. An important book on a topic that has been neglected for too long, *Geopolitics: A Guide to the Issues* will provide readers with an enhanced understanding of how geography influences personal, national and international economics, politics and security. The work begins with the history of geopolitics from the late 19th century to the present, then discusses the intellectual renaissance the discipline is experiencing today due to the prevalence of international security threats involving territorial, airborne, space-based and waterborne possession and acquisition. The book emphasizes current and emerging international geopolitical trends, examining how the U.S. and other countries including Australia, Brazil, China, India and Russia are integrating geopolitics into national security planning. It profiles international geopolitical scholars and their work and analyzes emerging academic, military and governmental literature, including gray literature and social networking technologies such as blogs and Twitter.

Quest for Space: The Indian Connect, 2014-02-15

Human endeavours in space over the past six decades have reached a stage that just about every facet of human life today has some complement of space capability contributing to it, encompassing the entire spectrum from telecommunications, navigation, weather forecasting, remote sensing, broadcasting and disaster management. Space exploration actually owes its origins to matters military, with civil applications coming about as a by-product. Capability building in space thereafter has witnessed frenzied progress in the spheres of both the military and the civil commercial. With an ever-increasing number of countries joining the space bandwagon, space is getting congested and competitive. International legislation on space, though well meaning, is largely viewed to be inadequate to address the concerns of equitable access to space and more alarmingly is reticent on the issue of militarisation and weaponisation. The Indian presence in the global space order is rather significant. Ranking sixth globally in terms of space budget and technological capability, India is capable of going beyond its calling. Its multi-dimensional space programme spans almost the entire spectrum from space launch to satellite construction and their employment in a large array of development-centric applications and in recent years in missions beyond the Earth. The Mangalyaan mission to Mars, currently underway, symbolises India's indigenous technological prowess and is a harbinger of its capability of cementing its status as a responsible space player at the global level. India thus stands today, technologically robust and self-reliant, well-poised in the global space order to look beyond its domestic charter and address the concerns of the international global community. Space legislation, situational awareness and international cooperation in space security are some of the geostrategic options analysed in this book, which

could facilitate Indian positioning in the global space order **Killer Robots** Armin Krishnan,2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law 676 ,2020-06-01 **Choice** ,2008
