Interpretation, Limitations and Future Direction

The topic frequency graph provides an overview of the most prevalent themes discussed by UK university students on Reddit over time. Notably, while the chart shows an increasing trend for all topics as the subreddit grows, it particularly highlights Topic 4 (Mental Health), becoming the most prominent over time. This aligns with the broader societal focus on mental health awareness. Additionally, the chart shows the relative prevalence of each topic over time. Among the top topics, we find a mix of academic concerns (e.g., academic pressure, university applications), social aspects (e.g., finding friends, loneliness), and personal well-being (e.g., mental health, finance). First, the prominence of topics such as job, university choice and application, accommodation and finance highlight the practical challenges that students face in their university journey. Secondly, students use such social media platforms as an avenue of seeking help and advice from other UK university students who have experienced similar concerns. These discussions not only provide valuable peer-to-peer support but also offer insights into the common struggles and decision-making processes of students.

However, it is important to acknowledge the limitations of this analysis. First, it only captures the public discourse on Reddit, which may not represent the full range of student experiences. Second, the data is retrospective, meaning it cannot capture real-time changes in student perspectives. Finally, the analysis is limited to the UK context, and the findings may not be generalizable to other countries or cultures.
