Policy guide to improve water productivity in small-scale agriculture Food and Agriculture Organization of the United Nations, 2020-05-01. In developing countries, further progress of irrigation is essential for increasing food security and farmers' income. However, developing small-scale schemes remains a challenge due to multiple factors that must be taken into consideration, such as diversity of small-scale schemes, a large number of water users, social disharmony over the water use, varying water demands of multi-cropping systems, heterogeneity of equipment over the scheme. Furthermore, on-farm irrigation development has a major role in enhancing Agricultural Water Management (AWM). The previous development methods considered the improvement of single-factor productivity, but agriculture is undergoing a global shift from the single objective of outputs such as yield or net income to multiple objectives of increasing outputs while conserving natural resources. Many pathways towards enhancement of Water Productivity (WP) are directly related to improving overall farm agronomic management, irrigation, fertilization, plant density, plant protection, etc., while external measures must be applied to ensure sustainability of introduced good practices, lack of input markets, scarce knowledge, poor infrastructures, water regulations, etc. Thus, introducing irrigation practices to farmers must undergo a step-wise process to ensure that costs do not outweigh achievable benefits and both institutional and technical environments are capable to sustain results. This is the case in smallholders' schemes where farmers are poorly resourced. In order to address these issues, the current policy guide presents a combined methodology which involves practical experiences drawn from FAO work in the three countries as well as researchers' results to line up a set of feasible measures to improve WP.

Field guide to improve crop water productivity in small-scale agriculture Food and Agriculture Organization of the United Nations, 2020-04-01. By 2050, the world's population will reach 9.1 billion, which requires an increase of food production by 70 percent compared to 2005 (FAO 2018). Nearly all the increase will occur in developing countries where agriculture plays a major role to provide employment, income, and to improve food security. One of the major challenges of increasing food supply is the limited water resources. Agriculture as the driver of freshwater exploitation has therefore to be transformed into more resource-efficient production (FAO 2003). The world's limited freshwater resources are potentially threatened by the expansion of agriculture. Increasing the potential output per amount of water used is an appropriate practice to improve production efficiency while protecting water resources. Therefore,

increasing the productivity of agricultural water use in a sustainable manner is essential to ultimately sustain the social and economic conditions of livelihoods Crop water productivity has grown into one of the major approaches to cope with water scarcity and advance crop water relation The number of conceptual frameworks and implications is ample but there is always a growing need to review the step by step approach beyond In this Field guide practical pathways are presented to provide a comprehensive approach for assessing and improving crop water productivity in small scale agriculture The Field guide draws lessons learned in three countries Burkina Faso Morocco and Uganda within the framework of FAO project Strengthening Agricultural Water Efficiency and Productivity at the African and Global Level funded by Swiss Agency for Development and Cooperation SDC *Guidelines for grazing and livestock monitoring* Dudu, D.,2022-04-11 This document is one of seven sets of guidelines developed to provide standards and recommendations for the integrated management of the country s natural assets The Guidelines for Grazing and Livestock Monitoring offer a methodology sets of indicators and a framework to holistically and coherently assess these two variables livestock and steppe productivity They are addressed to decision makers staff of the Ministry of Agriculture and Forestry MAF national and regional grazing management plan authorities local and regional institutions who will participate in monitoring shepherds and any other relevant stakeholders
