Stone Spaces Cambridge Studies In Advanced Mathematics:

Stone Spaces Peter T. Johnstone, 1982 A unified treatment of the corpus of mathematics that has developed out of M H Stone's representation theorem for Boolean algebras 1936 which has applications in almost every area of modern mathematics **Foundations of Software Science and Computational Structures** Roberto Amadio, 2008-03-18 This book constitutes the refereed proceedings of the 11th International Conference on Foundations of Software Science and Computational Structures FOSSACS 2008 held in Budapest Hungary in March April 2008 as part of ETAPS 2008 the European Joint Conferences on Theory and Practice of Software The 33 revised full papers presented together with the abstract of 1 invited talk were carefully reviewed and selected from 124 submissions A broad variety of theories and methods to support analysis synthesis transformation and verification of programs and software systems are addressed including the following topics algebraic models automata and language theory behavioural equivalences categorical models computation processes over discrete and continuous data infinite state systems computational structures logics of programs modal spatial and temporal logics models of concurrent reactive distributed and mobile systems process algebras and calculi semantics of programming languages software specification and refinement type systems and type theory fundamentals of security semi structured data program correctness and verification **Mathematical Theory of Domains** V. Stoltenberg-Hansen, I. Lindström, E. R. Griffor, 1994-09-22 Introductory textbook general reference in domain theory for professionals in computer science and logic **Handbook of the History of General Topology** C.E. Aull, R. Lowen, 2013-04-18 This book is the first one of a work in several volumes treating the history of the development of topology The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and work of individual topologists with specific schools of topology with research in topology in various countries and with the development of topology in different periods The work is not restricted to topology in the strictest sense but also deals with applications and generalisations in a broad sense Thus it also treats e g categorical topology interactions with functional analysis convergence spaces and uniform spaces Written by specialists in the field it contains a wealth of information which is not available anywhere else **Set Theory** John L. Bell, 2011-05-05 This monograph is a follow up to the author's classic text Boolean Valued Models and Independence Proofs in Set Theory providing an exposition of some of the most important results in set theory obtained in the 20th century the independence of the continuum hypothesis and the axiom of choice Aimed at research students and academics in mathematics mathematical logic philosophy and computer science the text has been extensively updated with expanded introductory material new chapters and a new appendix on category theory and includes recent developments in the field Numerous exercises **Vertex Operator Algebras, Number Theory and Related Topics** Matthew Krauel, Michael Tuite, Gaywalee Yamskulna, 2020-07-13 This volume contains the proceedings of the International Conference on Vertex Operator Algebras Number Theory and Related Topics held from June 11-15 2018 at California State University

Sacramento California The mathematics of vertex operator algebras vector valued modular forms and finite group theory continues to provide a rich and vibrant landscape in mathematics and physics The resurgence of moonshine related to the Mathieu group and other groups the increasing role of algebraic geometry and the development of irrational vertex operator algebras are just a few of the exciting and active areas at present The proceedings center around active research on vertex operator algebras and vector valued modular forms and offer original contributions to the areas of vertex algebras and number theory surveys on some of the most important topics relevant to these fields introductions to new fields related to these and open problems from some of the leaders in these areas

From a Geometrical Point of View Jean-Pierre Marquis, 2008-11-20 From a Geometrical Point of View explores historical and philosophical aspects of category theory trying therewith to expose its significance in the mathematical landscape The main thesis is that Klein s Erlangen program in geometry is in fact a particular instance of a general and broad phenomenon revealed by category theory The volume starts with Eilenberg and Mac Lane s work in the early 1940 s and follows the major developments of the theory from this perspective Particular attention is paid to the philosophical elements involved in this development The book ends with a presentation of categorical logic some of its results and its significance in the foundations of mathematics From a Geometrical Point of View aims to provide its readers with a conceptual perspective on category theory and categorical logic in order to gain insight into their role and nature in contemporary mathematics It should be of interest to mathematicians logicians philosophers of mathematics and science in general historians of contemporary mathematics physicists and computer scientists

Practical Foundations of Mathematics Paul Taylor, 1999-05-13 Practical Foundations collects the methods of construction of the objects of twentieth century mathematics Although it is mainly concerned with a framework essentially equivalent to intuitionistic Zermelo Fraenkel logic the book looks forward to more subtle bases in categorical type theory and the machine representation of mathematics Each idea is illustrated by wide ranging examples and followed critically along its natural path transcending disciplinary boundaries between universal algebra type theory category theory set theory sheaf theory topology and programming Students and teachers of computing mathematics and philosophy will find this book both readable and of lasting value as a reference work

The Necessary Structure of the All-pervading Aether Peter Forrest, 2013-05-02 In this book I investigate the necessary structure of the aether the stuff that fills the whole universe Some of my conclusions are 1 There is an enormous variety of structures that the aether might for all we know have 2 Probably the aether is point free 3 In that case it should be distinguished from Space time which is either a fiction or a construct 4 Even if the aether has points we should reject the orthodoxy that all regions are grounded in points by summation 5 If the aether is point free but not continuous its most likely structure has extended atoms that are not simples 6 Space time is symmetric if and only if the aether is continuous 7 If the aether is continuous we should reject the standard interpretation of General Relativity in which geometry determines gravity 8 Contemporary physics undermines an objection to discrete

aether based on scale invariance but does not offer much positive support
