Koul, S. Swapna, G. S. Karthikeya, 2024-06-27 This book presents up to date information about WLAN antenna designs for students researchers and professionals who want to design radiating systems to be deployed for practical

coverage The book primarily focuses on pattern diversity antennas Pattern diversity antennas are very vital in wireless communication High correlation between multiple signals can result in low data throughput which can be solved by using antennas with pattern diversity Beam scanning antennas and their variants are also described in detail Pattern diversity antenna systems with multiport feeds are also comprehensively discussed in this book For a multiport system to maintain a reasonable link budget equal antenna gains are preferred for the required antenna coverage The book further describes the latest techniques to enhance and equalize the antenna gain within a compact radiating system With increasing demand for faster connectivity with minimum path loss the demand for high gain antennas is rapidly increasing Thereby a detailed discussion on gain enhancement with the latest high gain antenna designs is requisite while describing WLAN antennas Some antenna designs discussed in the book are based on additive manufacturing for their design and fabrication Additive manufacturing is a much sought after technology today that allows rapid development of antennas at an affordable cost Many recent WLAN antennas make use of this technology to develop versatile antenna designs Finally the book includes a section on wide band antenna designs Antenna designs that reduce the scanning loss are also discussed **Reinforced Polymer**

Composites Victor V. Tcherdyntsev, 2021-09-01 This book consisting of 21 articles including three review papers written by research groups of experts in the field considers recent research on reinforced polymer composites Most of them relate to the fiber reinforced polymer composites which are a real hot topic in the field Depending on the reinforcing fiber nature such composites are divided into synthetic and natural fiber reinforced ones Synthetic fibers such as carbon glass or basalt provide more stiffness while natural fibers such as jute flax bamboo kenaf and others are inexpensive and biodegradable making them environmentally friendly To acquire the benefits of design flexibility and recycling possibilities natural reinforcers can be hybridized with small amounts of synthetic fibers to make them more desirable for technical applications Elaborated composites have great potential as structural materials in automotive marine and aerospace application as fire resistant concrete in bridge systems as mechanical gear pair as biomedical materials for dentistry and orthopedic application and tissue engineering as well as functional materials such as proton exchange membranes biodegradable superabsorbent resins and polymer electrolytes Solid Modeling and Applications Dugan Um, 2015-09-29

The lessons in this fundamental text equip students with the theory of Computer Assisted Design CAD Computer Assisted Engineering CAE the essentials of Rapid Prototyping as well as practical skills needed to apply this understanding in real world design and manufacturing settings The book includes three main areas CAD CAE and Rapid Prototyping each enriched with numerous examples and exercises In the CAD section Professor Um outlines the basic concept of geometric modeling Hermite and Bezier Spline curves theory and 3 dimensional surface theories as well as rendering theory The CAE section explores mesh generation theory matrix notion for FEM the stiffness method and truss Equations And in Rapid Prototyping the author illustrates stereo lithographic theory and introduces popular modern RP technologies Solid Modeling and Applications Rapid Prototyping CAD

and CAE Theory is ideal for university students in various engineering disciplines as well as design engineers involved in product design analysis and validation
