In the Mind's Eye National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Techniques for the Enhancement of Human Performance, 1992-02-01 The archer stands and pulls back the bow visualizing the path of the arrow to the target Does this mental exercise enhance performance Can we all use such techniques to improve performance in our daily lives In the Mind s Eye addresses these and other intriguing questions This volume considers basic issues of performance exploring how techniques for quick learning affect long term retention whether an expert s behavior can serve as a model for beginners if team performance is the sum of individual members performances and whether subliminal learning has a basis in science The book also considers meditation and some other pain control techniques Deceit and the ability to detect deception are explored in detail In the area of self assessment techniques for career development the volume evaluates the widely used Myers Briggs Type Indicator *Emerging Minds* Robert S. Siegler, 1998-10-29 How do children acquire the vast array of concepts strategies and skills that distinguish the thinking of infants and toddlers from that of preschoolers older children and adolescents In this new book Robert Siegler addresses these and other fundamental questions about children s thinking Previous theories have tended to depict cognitive development much like a staircase At an early age children think in one way as they get older they step up to increasingly higher ways of thinking Siegler proposes that viewing the development within an evolutionary framework is more useful than a staircase model The evolution of species depends on mechanisms for generating variability for choosing adaptively among the variants and for preserving the lessons of past experience so that successful variants become increasingly prevalent The development of children s thinking appears to depend on mechanisms to fulfill these same functions Siegler s theory is consistent with a great deal of evidence It unifies phenomena from such

areas as problem solving reasoning and memory and reveals commonalities in the thinking of people of all ages Most important it leads to valuable insights regarding a basic question about children s thinking asked by cognitive developmental and educational psychologists How does change occur

Interactions Among Aptitudes, Strategies, and knowledge in Cognitive Performance Wolfgang Schneider,Franz E. Weinert,2012-12-06 During the past two decades a renewed interest in children s cognitive development has stimulated numerous research activities that have been summarized in hundreds of books In our view the field of memory development provides a particularly nice example of the progress that has been made so far Since John Flavell s landmark symposium on What Is Memory Development the Development of in 1971 the question of what develops has been addressed in different ways yielding a rather complex pattern of findings A closer look at current research outcomes reveals that ways of describing and explaining developmental changes in memory performance have changed considerably during the past 20 years That is while individual differences in the use of cognitive strategies were conceived of as the most important predictors of individual differences in memory performance in the 1970s the crucial role of knowledge has been demonstrated in research conducted in the 1980s More recent studies have repeatedly emphasized that neither changes in strategies nor knowledge alone is sufficient to explain general patterns of memory development Here the claim is that strategies and different forms of knowledge e g world knowledge domain knowledge or metacognitive knowledge interact in rather complex ways to achieve successful memory performance We believe that this claim can be generalized to different fields dealing with intelligent information processing

Psychology and Law Andreas Kapardis,2014-02-10 Now in its fourth edition Psychology and Law is a comprehensive guide to the complex interactions between psychology and criminal law Andreas Kapardis explores contemporary psycho legal issues both in and out of the courtroom from eyewitness testimony investigative interviewing jury decision making and sentencing as a human process to restorative justice terrorism police prejudice and offender profiling The book draws upon sources from Europe North America and Australia to investigate the subjectivity and human fallibility inherent in our systems of justice It suggests ways of minimising undesirable influences on judicial decision making and discusses procedures for dealing with witnesses and suspects Fully revised and with greater emphasis on relevant law Psychology and Law remains the leading text on legal psychology for students and practitioners in psychology law criminology social work and law enforcement

Modern Languages and Learning Strategies Michael Grenfell,Vee Harris,2002-01-04 Every secondary school pupil studies modern foreign languages as part of the curriculum and some do so with considerably more success than others This book looks firstly at the ways in which languages can be taught and secondly at case studies that highlight the practical methods that will help teachers get the best results The case studies included show that the best learners are those who have developed learning strategies that help them succeed These learning strategies are examined through practical examples carried out in classrooms and advice is given about ways in which teachers can ensure that all their pupils have the opportunity to develop

these skills Lots of suggestions are made about the various activities teachers can carry out in order to make learning enjoyable and positive In some cases the results are shown to be very encouraging and any language teacher should be left with a feeling not only of renewed enthusiasm for their subject area but also a deeper understanding of how to enable learners to reach their full potential
