The faculty and review group consisted of leading global authorities on glaucoma diagnostic testing. The preparation for the Consensus was unique in its format see page xii. Repor **Atlas of Optical Coherence Tomography of Macular Diseases** Vishali

Gupta, Amod Gupta, Mangat R. Dogra, 2004-11-12. The emergence of Optical Coherence Tomography (OCT) in recent years has revolutionized the way we see the retina. Providing in real time high resolution cross sectional images of the macula that are very similar to obtaining in vivo histopathological specimens, OCT represents a major advance in the diagnostics of retinal disease. The excitement of working with this new tool has been dampened by the non availability of any standard textbook on the subject and meant that every new finding on the OCT saw us rushing to the library almost on a daily basis to locate any published reports on the subject. Until now. Containing nearly 900 scans of both normal and diseased appearances most in full color, **Atlas of Optical Coherence Tomography of Macular Diseases** covers how to use Stratus OCT for diagnosing various macular disorders, identifying correct therapeutic approaches and monitoring the responses to therapies and interventions. The authors provide brief case summaries, fundus photographs, fluorescein angiography and the OCT images and the follow up images. They discuss OCT applications for diagnosis, management and follow up in diabetic macular edema, macular hole, taut posterior hyaloid membrane, vitreofoveal traction, idiopathic central serous chorioretinopathy, submacular pathology and more. **Glaucoma** Franz Grehn, Robert Stamper, 2012-12-06. **Essentials in Ophthalmology** is a new review series covering all of ophthalmology categorized in eight subspecialties. It will be published quarterly thus each subspecialty will be reviewed biannually. Given the multiplicity of medical publications already available, why is a new series needed? Consider that the half life of medical knowledge is estimated to be around 5 years. Moreover it can be as long as 8 years between the first

description of a medical innovation in a peer reviewed scientific journal and publication in a medical textbook. A series that narrows this time span between journal and textbook would provide a more rapid and efficient transfer of medical knowledge into clinical practice and enhance care of our patients. Image Processing in Optical Coherence Tomography Using Matlab

Robert Koprowski, Zygmunt Wróbel, 2011. This book covers the results of the creation of methods for ophthalmologists support in OCT images automated analysis. These methods like the application developed on their basis are used during routine examinations carried out in hospital. The monograph comprises proposals of new and also of known algorithms modified by authors for image analysis and processing presented on the basis of example of Matlab environment with Image Processing tools. The results are not only obtained fully automatically but also repeatable providing doctors with quantitative information on the degree of pathology occurring in the patient. In this case the anterior and posterior eye segment is analysed e.g. the measurement of the filtration angle or individual layers thickness. To introduce the Readers to subtleties

related to the implementation of selected fragments of algorithms the notation of some of them in the Matlab environment has been given The presented source code is shown only in the form of example of implementable selected algorithm In no way we impose here the method of resolution on the Reader and we only provide the confirmation of a possibility of its practical implementation
