William Schabas, a Canadian human rights lawyer, has been a vocal critic of the ICC. He has argued that the ICC is a "neo-colonial project" and that it is biased against African states. He has also argued that the ICC is a "tool of imperialism" and that it is a "threat to the sovereignty of states".

Topics in Multidimensional Linear Systems Theory Eva Zerz, 2000-08-16 The past few decades have witnessed an increasing interest in the field of multidimensional systems theory This is concerned with systems whose trajectories depend not on one single variable usually interpreted as time or frequency but on several independent variables such as the coordinates of an image The behavioural approach introduced by J C Willems provides a particularly suitable framework for developing a linear systems theory in several variables The book deals with the classical concepts of autonomy controllability observability and stabilizability All the tests and criteria given are constructive in the sense that algorithmic versions may be implemented in modern computer algebra systems using Gr bner basis techniques There is a close connection between multidimensional systems theory and robust control of one dimensional systems with several uncertain parameters The central link consists in the basic tool of linear fractional transformations The book concludes with examples from the theory of electrical networks

Recent Stability Issues for Linear Dynamical Systems Nicola Guglielmi, Christian Lubich, Nicolas Gillis, Volker Mehrmann, Punit Sharma, Bart Vandereycken, 2024-12-13 This book concerns matrix nearness problems in the framework of spectral optimization It addresses some current research directions in spectral based stability studies for differential equations with material on ordinary differential equations ODEs differential algebraic equations and dynamical systems Here stability is interpreted in a broad sense which covers the need to develop stable and reliable algorithms preserving some qualitative properties of the computed solutions methodologies which are

helpful to assess the onset of potential instabilities or loss of robustness and tools to determine the asymptotic properties of the solution or its discretization The topics considered include the computation of robustness measures for linear problems the use of low rank ODEs to approximate such measures via gradient systems the regularity stability passivity and controllability analysis of structured linear descriptor systems and the use of acceleration techniques to deal with some of the presented computational problems Although the emphasis is on the numerical study of differential equations and dynamical systems the book will also be of interest to researchers in matrix theory spectral optimization and spectral graph theory as well as in dynamical systems and systems theory
