OPERATIONS AND SUPPLY CHAIN MANAGEMENT Prof. (Dr.) Milind Audumbar Kulkarni, Mr. Hemant Vishwanath More, 2022-06-20 What is Operations management Every business is managed through three major functions finance marketing and operations management Illustrates this by showing that the vice presidents of each of these functions report directly to the president or CEO of the company Other business functions such as accounting purchasing human resources and engineering support these three major functions Finance is the function responsible for managing cash flow current assets and capital investments Marketing is responsible for sales generating customer demand and understanding customer wants and needs Most of us have some idea of what finance and marketing are about but what does operations management do Operations management OM is the business function that plans organizes coordinates and controls the resources needed to produce a company's goods and services Operations management is a management function It involves managing people equipment technology information and many other resources Operations management is the central core function of every company This is true whether the company is large or small provides a physical good or a service is for profit or not for profit Every company has an operations management function Actually all the other organizational functions are there primarily to support the operations function Without operations there would be no goods or services to sell Consider a retailer such as The Gap which sells casual apparel The marketing function provides promotions for the merchandise and the finance function provides the needed capital It is the operations function however that plans and coordinates all the resources needed to design produce and deliver the merchandise to the various retail locations Without operations there would be no goods or services to sell to customers
