CHAPTER 2

Section 2-1

Provide a reasonable description of the sample space for each of the random experiments in Exercises 2.1.1 to 2.1.6. There can be more than one acceptable interpretation of each experiment. Describe any assumptions you make.

- 2.1.1 Each of four transmitted bits is classified as either in error or not in error.

Let e and o denote a bit in error and not in error (o denotes okay), respectively.

$$S = \left\{ \begin{array}{l} eeee, eoeo, oeee, oooo, \\ eeo o, eoe o, oe o o, oo e o, \\ eoe e, eooo, oeoe, oo oe, \\ eeo o, oo o o, ooe o, oooo \end{array} \right\}$$

- 2.1.2 The number of hits (views) is recorded at a high-volume Web site in a day.

$$S = \{0, 1, 2, \dots\} = \text{set of nonnegative integers}$$

- 2.1.3 In the final inspection of electronic power supplies, either units pass, or three types of nonconformities might occur: functional, minor, or cosmetic. Three units are inspected.

Let a denote an acceptable power supply.

Let f , m , and c denote a power supply that has a functional, minor, or cosmetic error, respectively.

$$S = \{a, f, m, c\}$$

- 2.1.4 An oscilloscope that displays three digits is used to measure current in milliamperes.

A vector with three components can describe the three digits of the oscilloscope. Each digit can be 0, 1, 2, ..., 9.

The sample space S is 1000 possible three digit integers, $S = \{000, 001, \dots, 999\}$

- 2.1.5 The following two questions appear on an employee survey questionnaire. Each answer is chosen from the five point scale 1 (never), 2, 3, 4, 5 (always).

Is the corporation willing to listen to and fairly evaluate new ideas?

How often are my co-workers important in my overall job performance?

Let an ordered pair of numbers, such as 43 denote the responses on the first and second question. Then, S consists of the 25 ordered pairs $\{11, 12, \dots, 55\}$

- 2.1.6 The time until service transaction is requested of a computer to the nearest millisecond.

$$S = \{0.1, 2, \dots\} \text{ in milliseconds}$$

Numerical Methods in Geomechanics J.B. Martins, 2012-12-06 Proceedings of the NATO Advanced Study Institute Braga Portugal August 24 September 4 1981

Applied Methods of Structural Reliability Milík Tichý, 2012-12-06 A quarter of the century has elapsed since I gave my first course in structural reliability to graduate students at the University of Waterloo in Canada Since that time on I have given many courses and seminars to students researchers designers and site engineers interested in reliability I also participated in and was responsible for numerous projects where reliability solutions were required During that period the scope of structural reliability gradually enlarged to become a substantial part of the general reliability theory First it is apparent that bearing structures should not be isolated objectives of interest and consequently that constntCted facilities should be studied Second a new engineering branch has emerged reliability engineering These two facts have highlighted new aspects and asked for new approaches to the theory and applications I always state in my lectures that the reliability theory is nothing more than mathematized engineering judgment In fact thanks mainly to probability and statistics and also to computers the empirical knowledge gained by Humankind s construction experience could have been transposed into a pattern of logic thinking able to produce conclusions and to forecast the behavior of engineering entities This manner of thinking has developed into an intricate network linked by certain rules which in a way can be considered a type of reliability grammar We can discern many grammatical concepts in the general structure of the reliability theory

Geotechnical Reliability Analysis Jie Zhang, Te Xiao, Jian Ji, Peng Zeng, Zijun Cao, 2023-09-14 This textbook systematically introduces the theories methods and algorithms for geotechnical reliability analysis There are a lot of illustrative examples in the textbook such that readers can easily grasp the concepts and theories related to geotechnical reliability analysis A unique feature of the textbook is that computer codes are also provided through carefully designed examples such that the methods and the algorithms described in the textbook can be easily understood In addition the computer codes are flexible and can be conveniently extended to analyze different types of realistic problems with little additional efforts

Urban Water Systems & Floods III S. Mambretti, D. Proverbs, 2020-12-04 Flooding is a global phenomenon that claims numerous lives worldwide each year Apart from the physical damage to buildings contents and loss of life which are the most obvious impacts of floods upon households and other more indirect losses are often overlooked These indirect and intangible impacts are generally associated with disruption to normal life and longer term health issues Flooding represents a major barrier to the alleviation of poverty in many parts of the developing world where vulnerable communities are often exposed to sudden and life threatening events As our cities continue to expand their urban infrastructures need to be re evaluated and adapted to new requirements related to the increase in population and the growing areas under urbanization Topics such as contamination and pollution discharges in urban water bodies as well as the monitoring of water recycling systems are currently receiving a great deal of

attention from researchers and professional engineers working in the water industry The papers contained in this volume cover these problems and deals with two main urban water topics water supply networks and urban drainage Originating from the 7th International Conference on Flood and Urban Water Management the included research works include innovative solutions that can help bring about multiple benefits toward achieving integrated flood risk and urban water management strategies and policy

Loss Models: From Data to Decisions, 4e Student Solutions Manual Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot, 2014-08-21 Student Solutions Manual to Accompany Loss Models From Data to Decisions Fourth Edition This volume is organised around the principle that much of actuarial science consists of the construction and analysis of mathematical models which describe the process by which funds flow into and out of an insurance system

Analyzing Uncertainty in Civil Engineering Wolfgang Fellin, Heimo Lessmann, Michael Oberguggenberger, Robert Vieider, 2005-12-19 This volume addresses the issue of uncertainty in civil engineering from design to construction Failures do occur in practice Attributing them to a residual system risk or a faulty execution of the project does not properly cover the range of causes A closer scrutiny of the adopted design the engineering model the data the soil construction interaction and the model assumptions is required Usually the uncertainties in initial and boundary conditions are abundant Current engineering practice often leaves these issues aside despite the fact that new scientific tools have been developed in the past decades that allow a rational description of uncertainties of all kinds from model uncertainty to data uncertainty It is the aim of this volume to have a critical look at current engineering risk concepts in order to raise awareness of uncertainty in numerical computations shortcomings of a strictly probabilistic safety concept geotechnical models of failure mechanisms and their implications for construction management execution and the juristic question of responsibility In addition a number of the new procedures for modelling uncertainty are explained The book is a result of a collaborate effort of mathematicians engineers and construction managers who met regularly in a post graduate seminar at the University of Innsbruck during the past years

Applications of Statistics and Probability in Civil Engineering Michael Faber, Jochen Koehler, Kazuyoshi Nishijima, 2011-07-15 Under the pressure of harsh environmental conditions and natural hazards large parts of the world population are struggling to maintain their livelihoods Population growth increasing land utilization and shrinking natural resources have led to an increasing demand of improved efficiency of existing technologies and the development of new ones A
